Cisco Cloud Control

The power of one

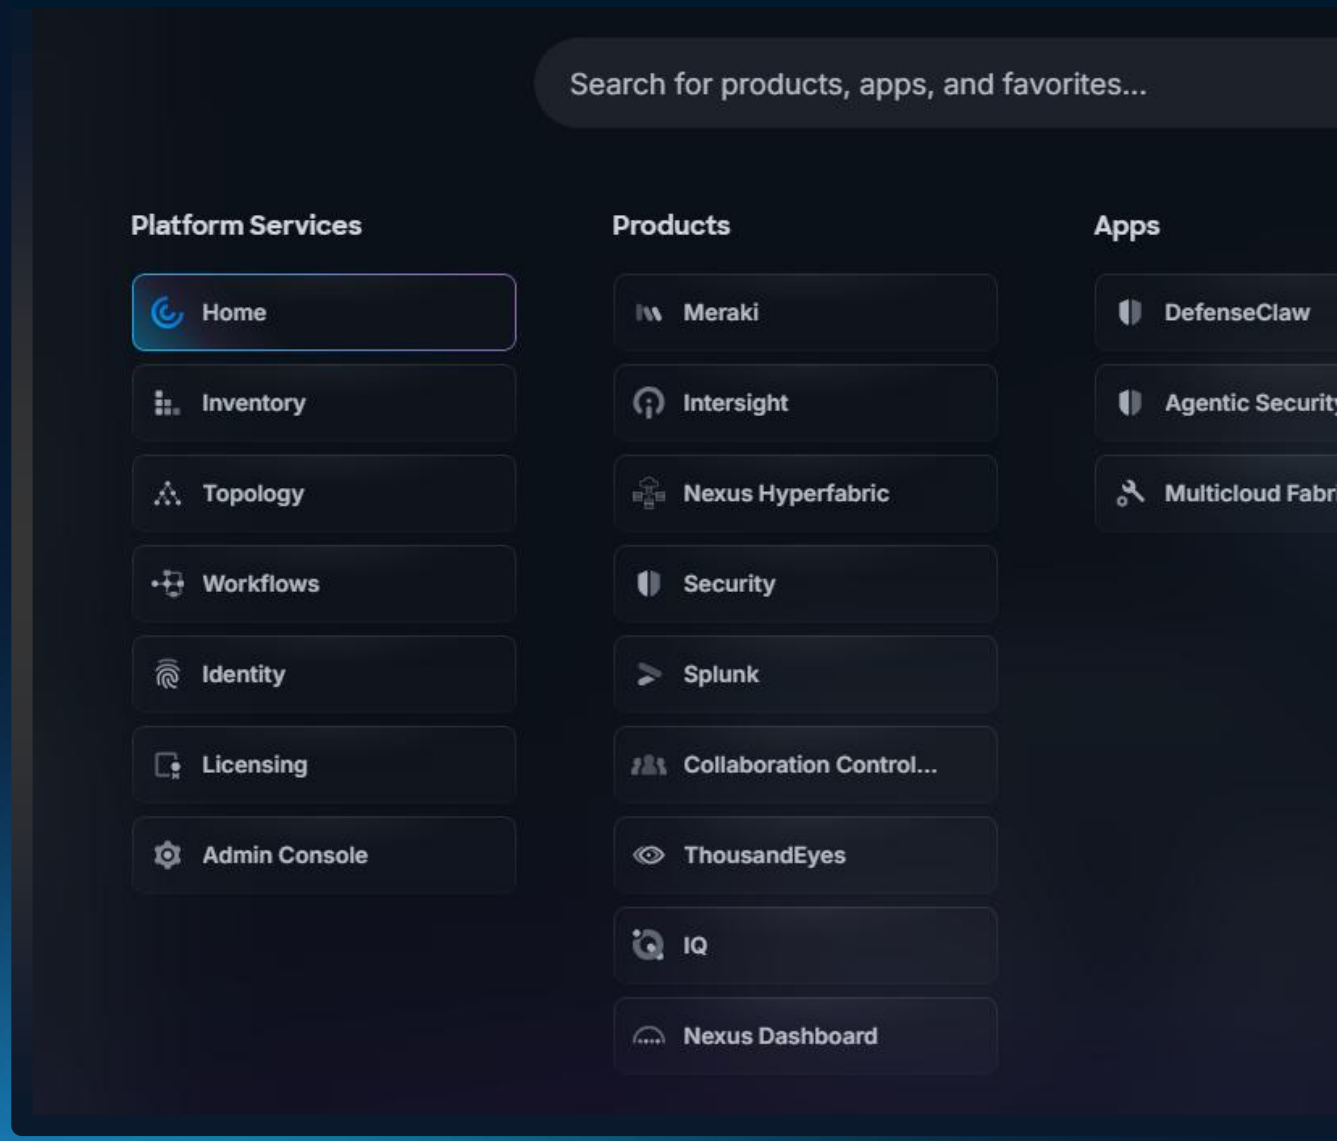

One login
Sign in once. See everything.

One inventory and topology
Every asset. See how it all connects, in real time.

One view for alerts
Actions correlates alerts across every product.

One assistant
Quick answers and action with AI Assistant.

One agentic workspace
Investigate and resolve together with AI Canvas.

Cisco Confidential

Unified inventory

See every Cisco asset in one place

Know what is connected

See assets from connected products in one inventory.

Find the right asset quickly

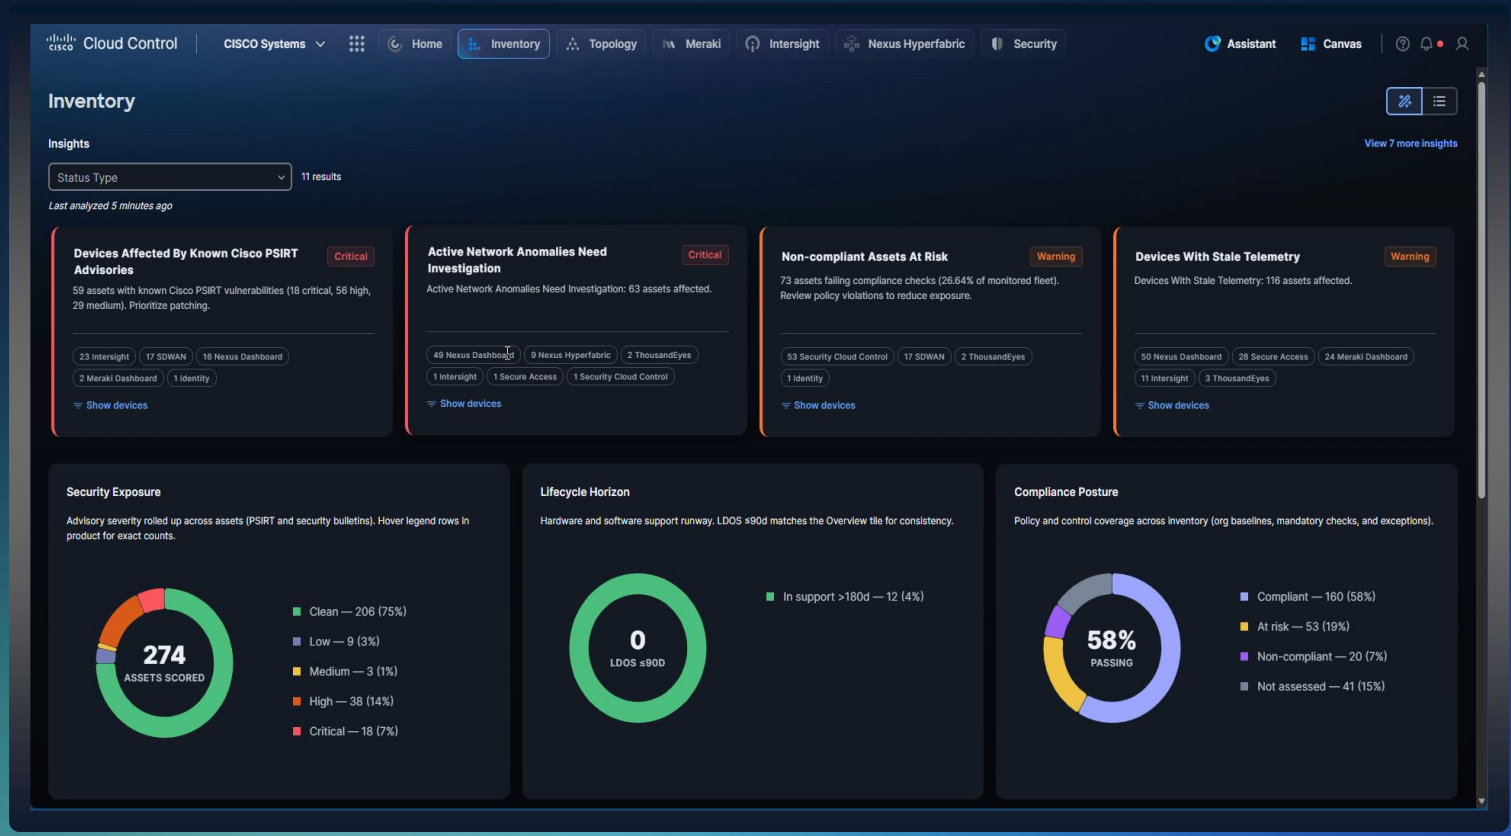

Use AI-powered search and filter without opening each product.

Give teams a consistent view

Work from the same asset information across operations.

Continue in the right product

Open the source product when deeper management is needed.

© 2026 Cisco and/or its affiliates. All rights reserved.

Cisco Confidential

Connected topology

See every site, branch and device in one view

Bring connections into one view

Map relationships across connected products and domains.

Understand dependencies

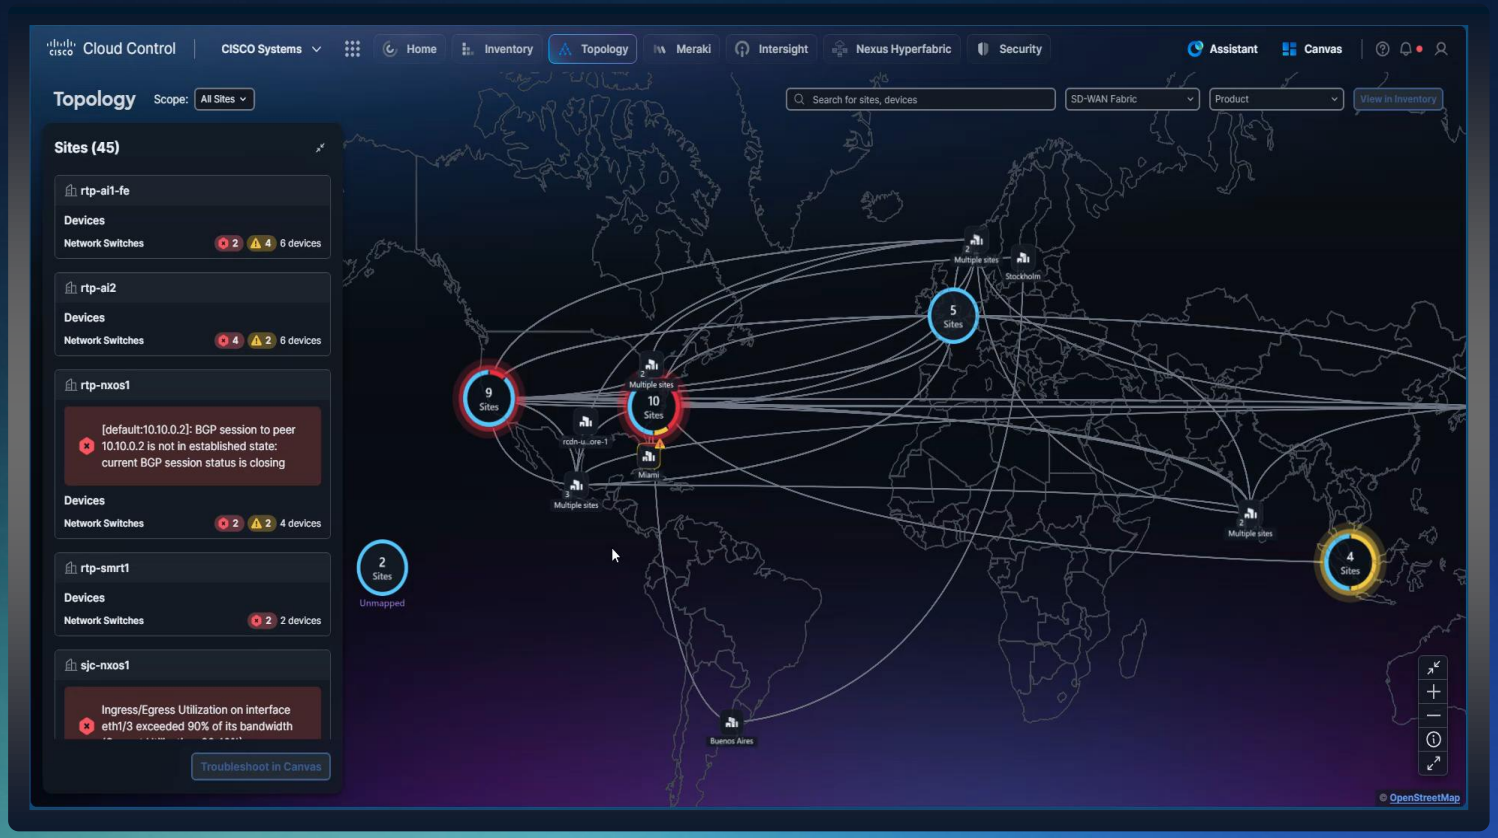

Trace how devices, sites, and services connect.

See what an issue could affect

Follow relationships before deciding what to do next.

Move directly to asset details

Open the related asset or product without searching again.

© 2026 Cisco and/or its affiliates. All rights reserved.

Cisco Confidential

Actions

Turn alerts into faster resolution

Cut through alert noise

Related alerts from connected products become one clear issue.

Focus teams on what matters

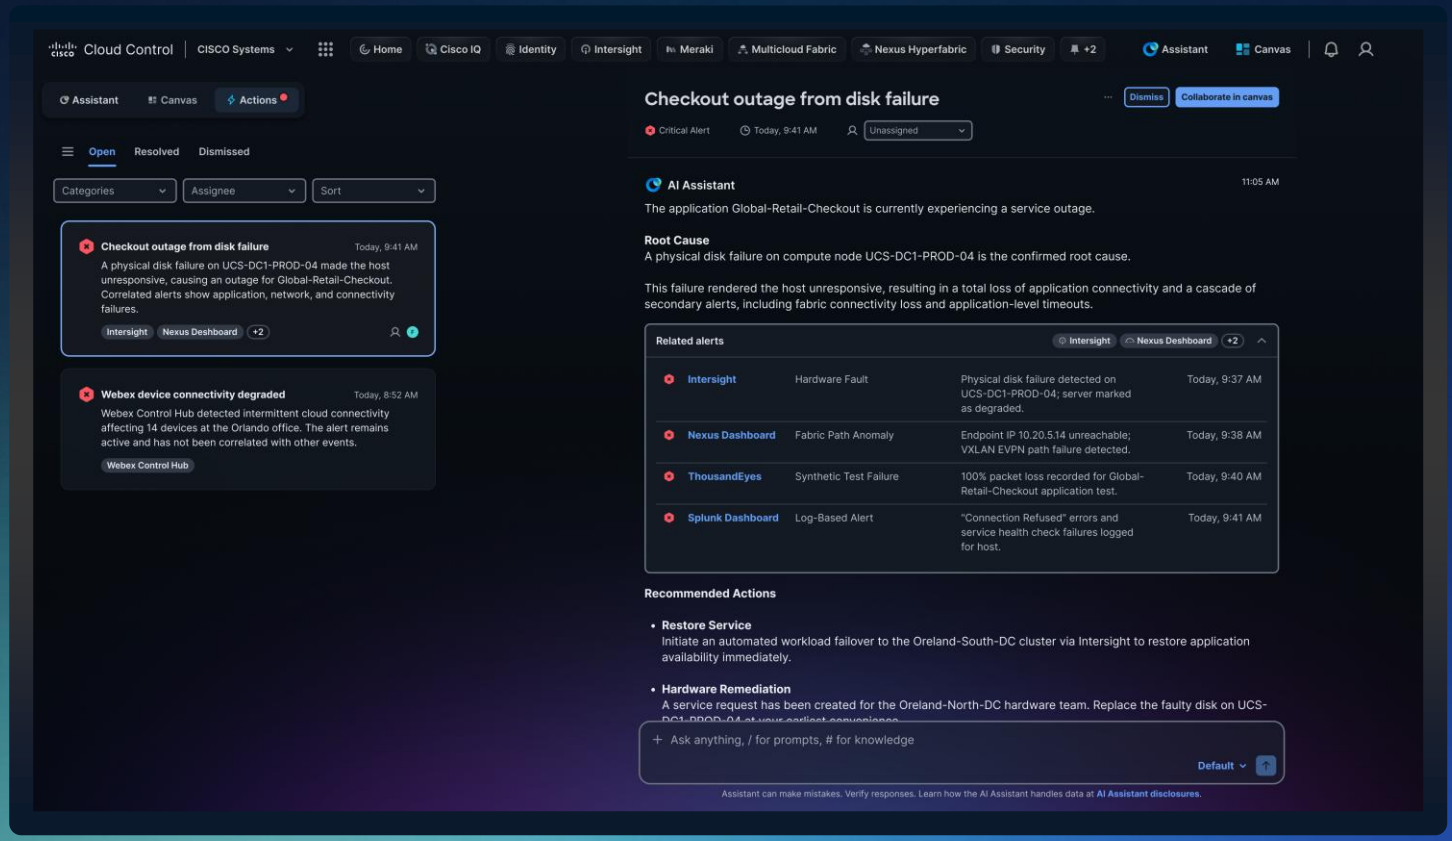

Priority and impact show where to start.

Start troubleshooting immediately

Opening an issue brings in the Assistant and relevant AI agents.

Move work toward resolution

Assign, track, and resolve each issue from one place.

© 2026 Cisco and/or its affiliates. All rights reserved.

Cisco Confidential

Assistant

One assistant across your work

Get answers without switching tools

Ask from anywhere in Cloud Control using the context already in view.

See more of the issue

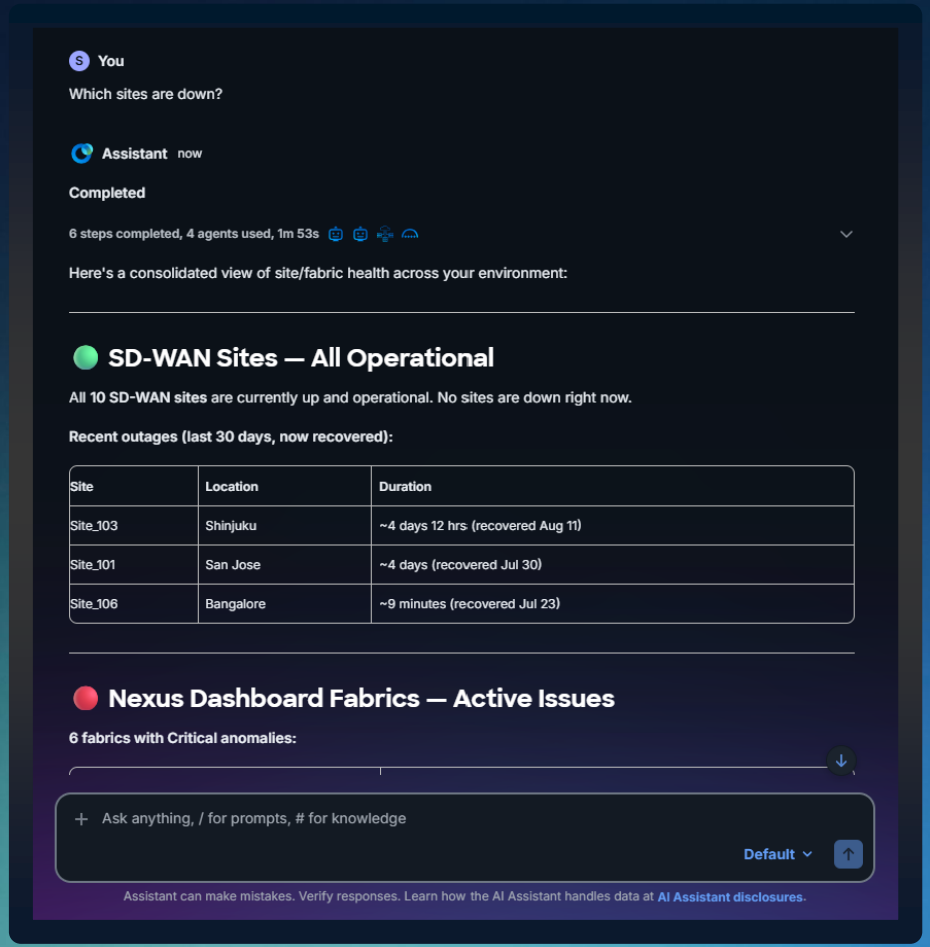

Use data from connected products to understand what is happening.

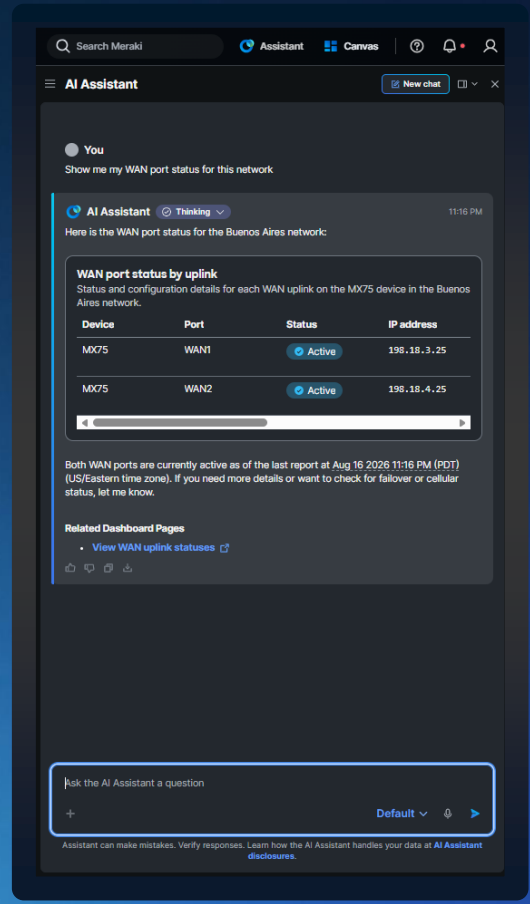

Move from answer to action

Follow recommended next steps or start a Workflow.

Bring in others without starting over

Move into AI Canvas with the issue and context intact.

© 2026 Cisco and/or its affiliates. All rights reserved.

Workflows

Automate change across products

Reduce repetitive work

Connect product actions into one reusable, no-code workflow.

Get predictable execution

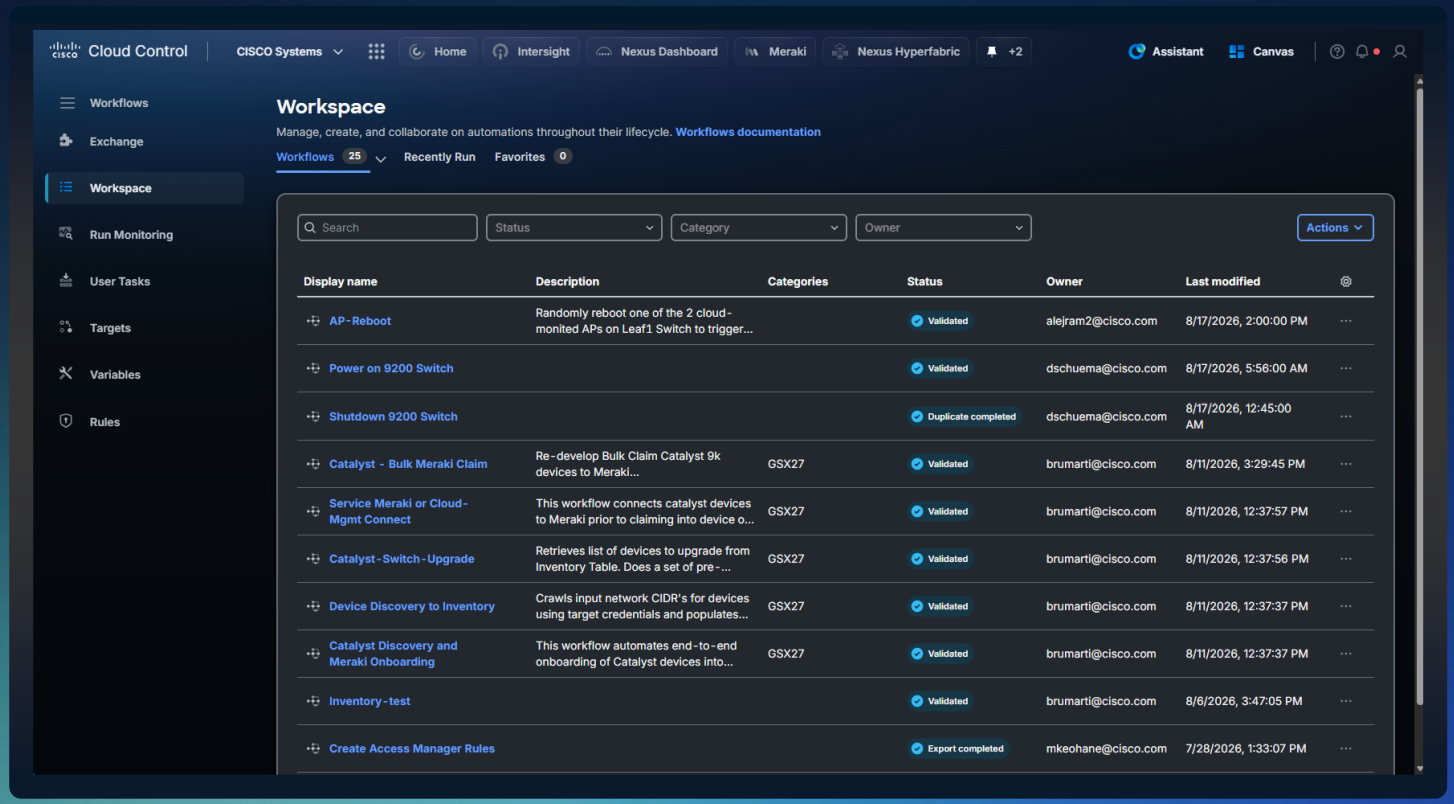

The same inputs follow the same defined steps every time.

Respond faster without handoffs

Start work from an alert, schedule, or request.

Scale automation with control

Reuse approved workflows and record what ran and changed.

Cisco AI Canvas

The industry's first multiplayer workspace for cross-domain agentic operations

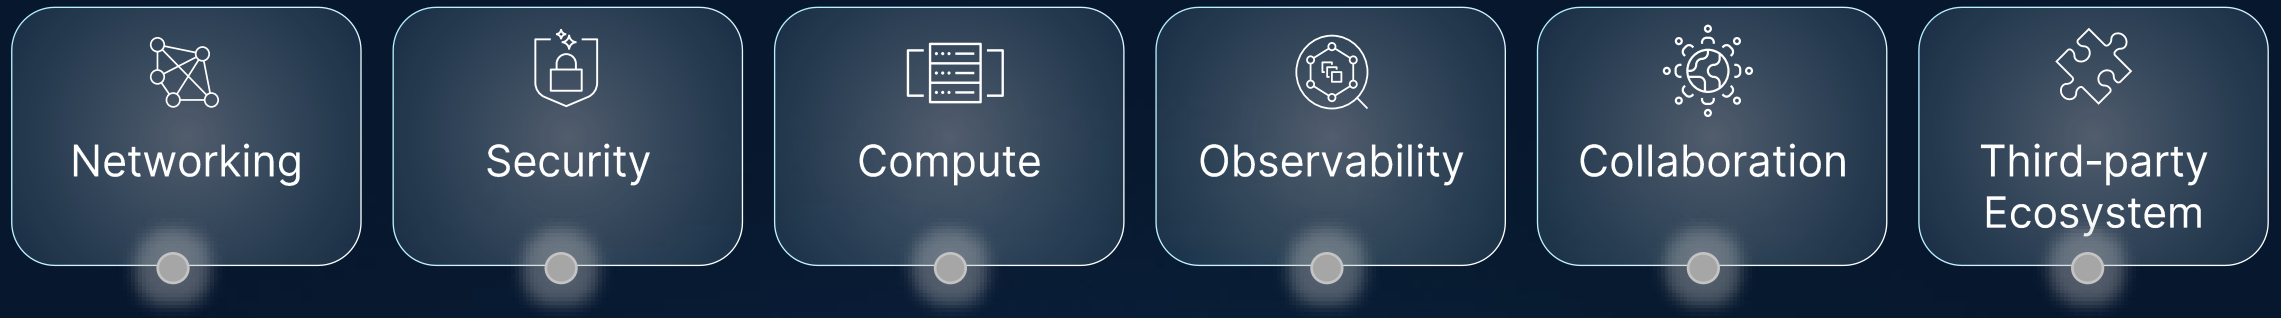

© 2026 Cisco and

Cisco Confidential

IT operations today

You see the symptom. The cause could be anywhere.

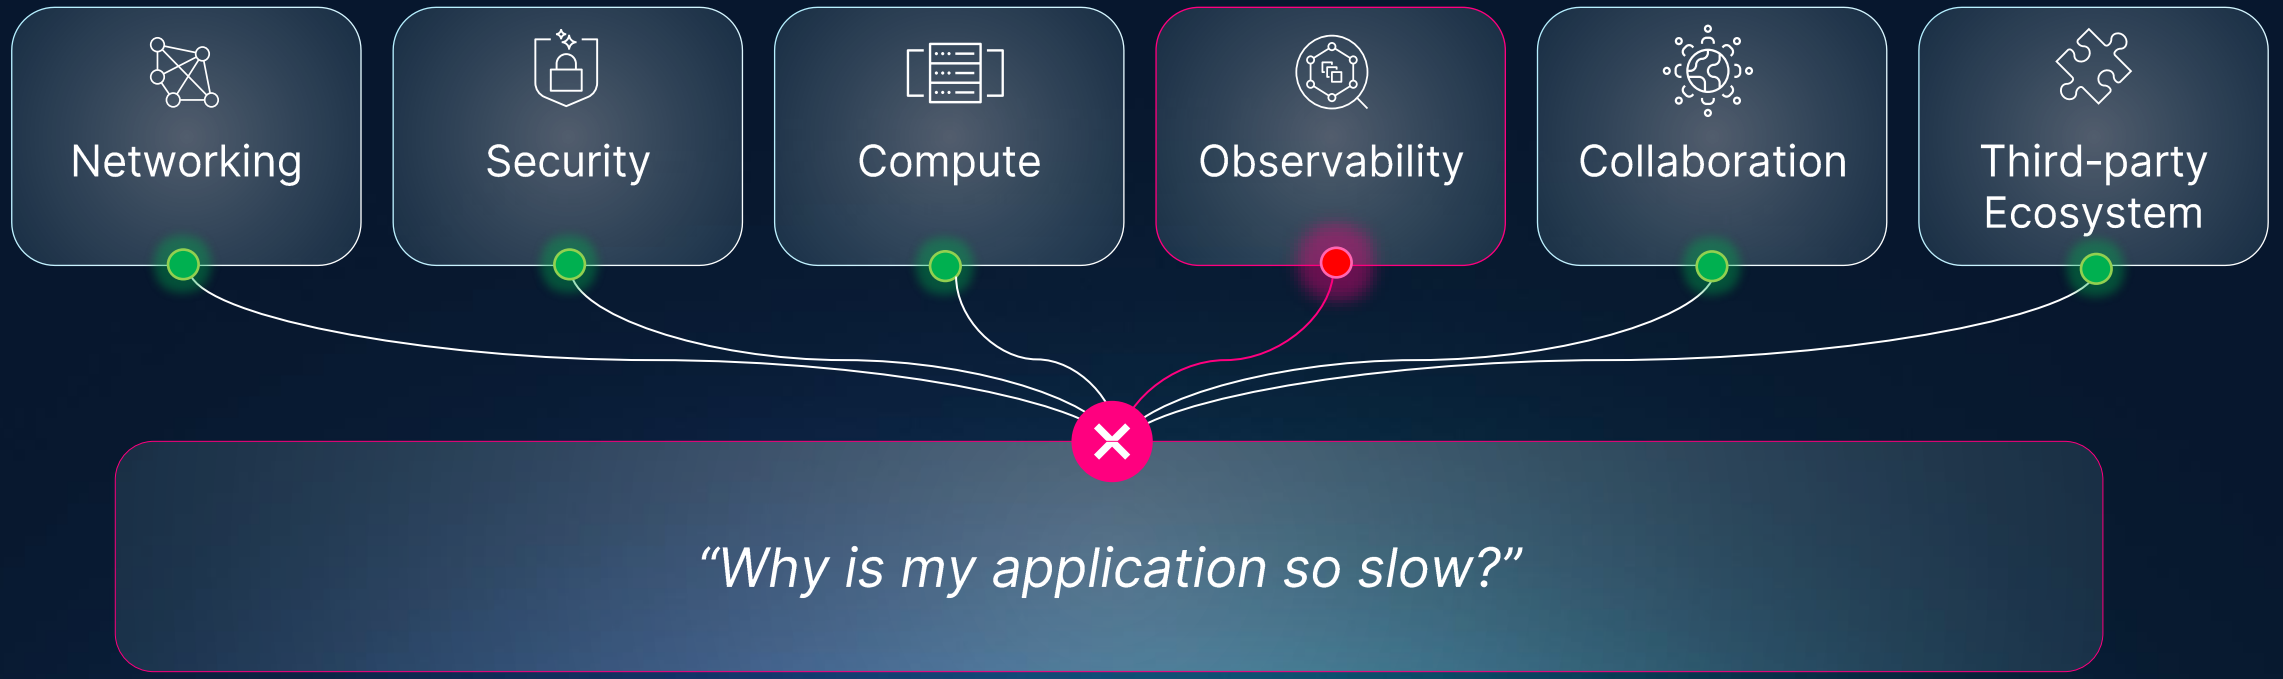

“Why is my application so slow?”

© 2026 Cisco and/or its affiliates. All rights reserved.

Cisco Confidential

Every domain. One agentic workspace.

Describe the problem. AI Canvas reasons across your entire environment to deliver the answer.

© 2026 Cisco and/or its affiliates. All rights reserved.

Cisco Confidential

Cisco AI Canvas

Where work gets done

See the whole issue

Across your entire Cisco portfolio and beyond.

Put AI agents to work

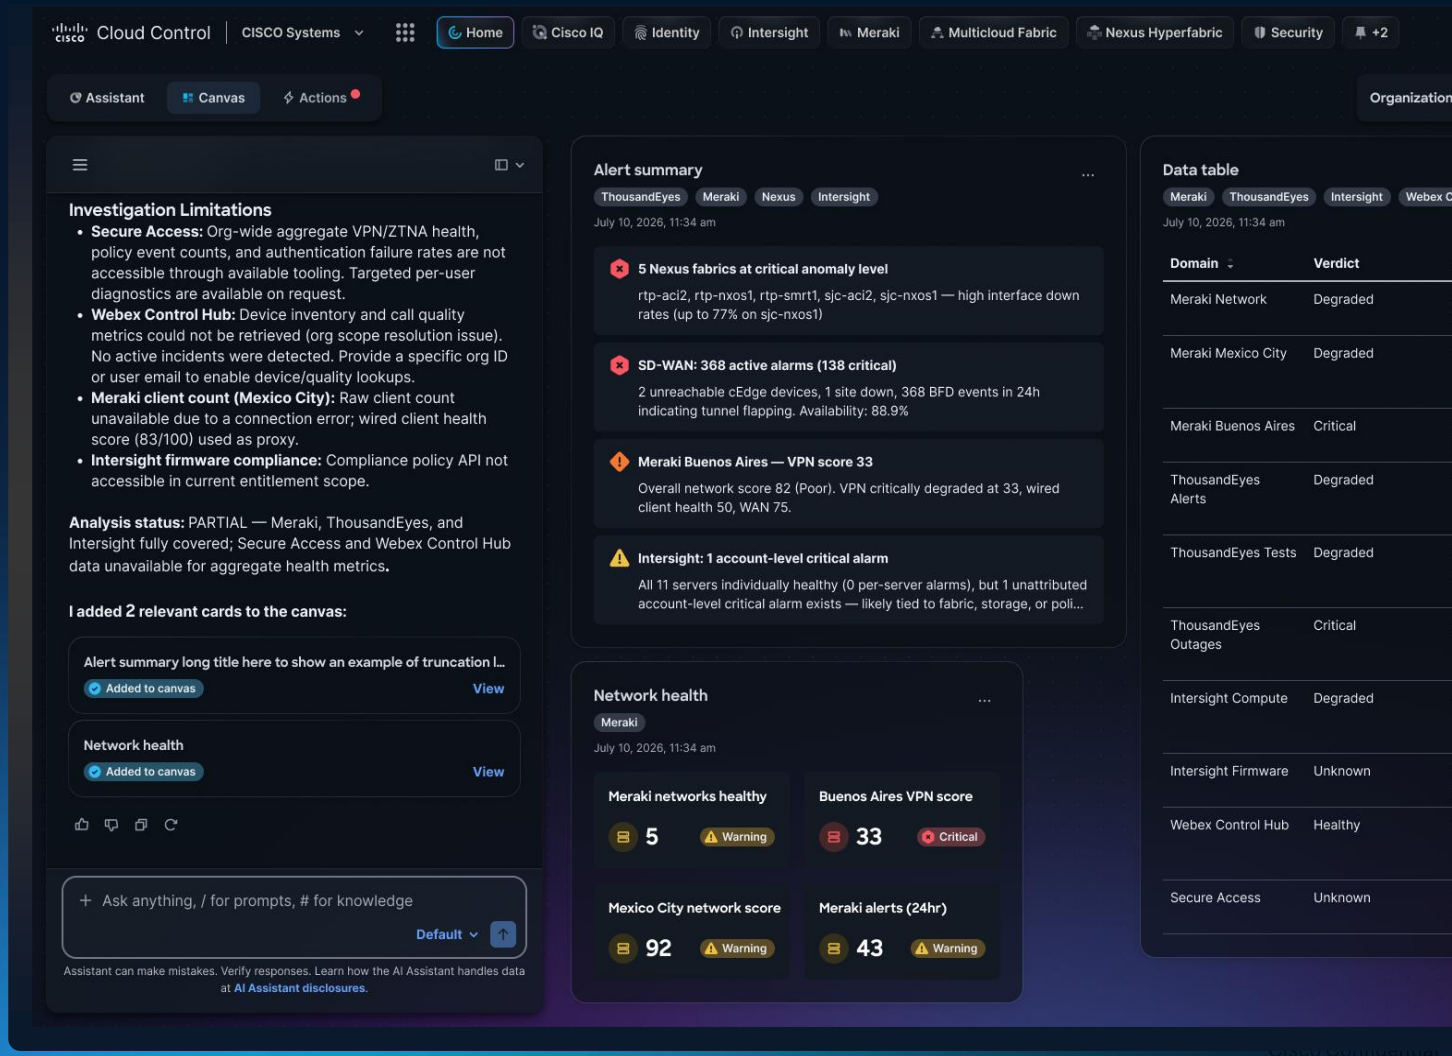

Agents gather data, reason across domains, and recommend next steps.

Work together in real time

Teams collaborate on one Canvas with the same live context.

Carry context through resolution

Handoffs, shift changes, and escalations keep the work intact.

© 2026 Cisco and/or its affiliates. All rights reserved.

Purpose-built for the operator

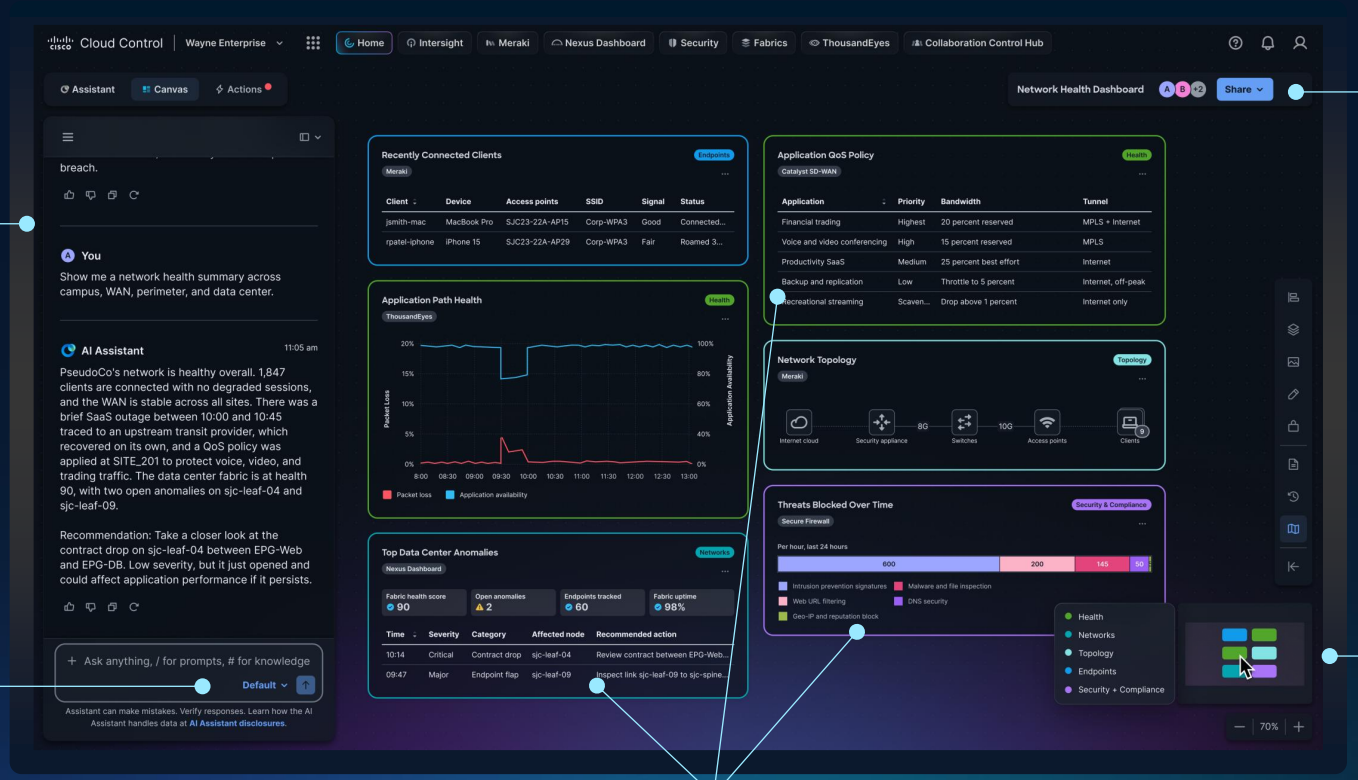

Inside AI Canvas

Conversational interface

- Ask questions in natural language
- Watch agents reason live

Agentic Modes

- Default for fast answers
- Reasoning for deep investigations

Multiplayer

- Share the board via link
- Everyone sees the same view

Board Organization

- Widgets color coded by category
- Mini-map for ease of navigation

Widgets

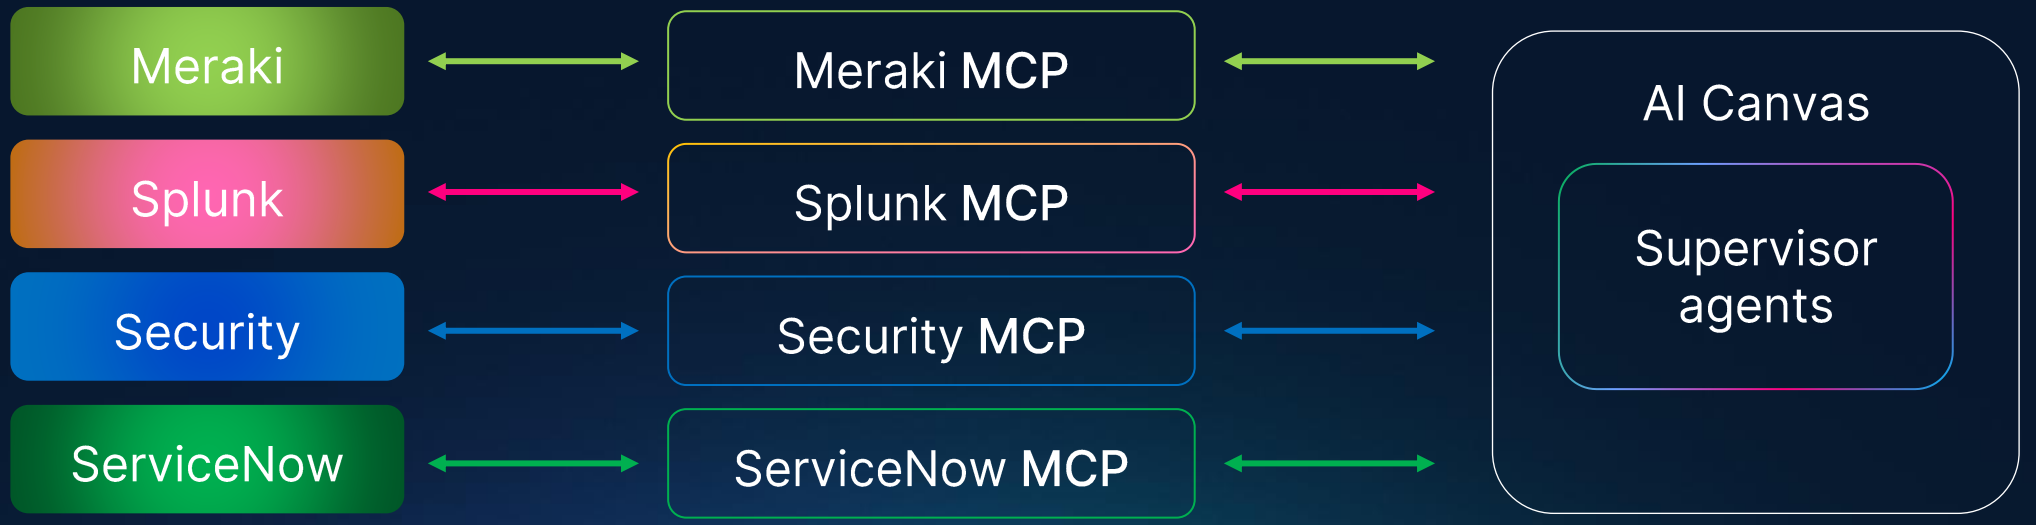

- Visualize topologies, charts, summaries, reports
- Drill into supported widgets to investigate further
- Export widgets as PDF

Cisco Confidential

Cloud Control Studio Beta

Build for your operations

Meet each operational need

Create applications around your environment, teams, and way of working.

Put expertise to work

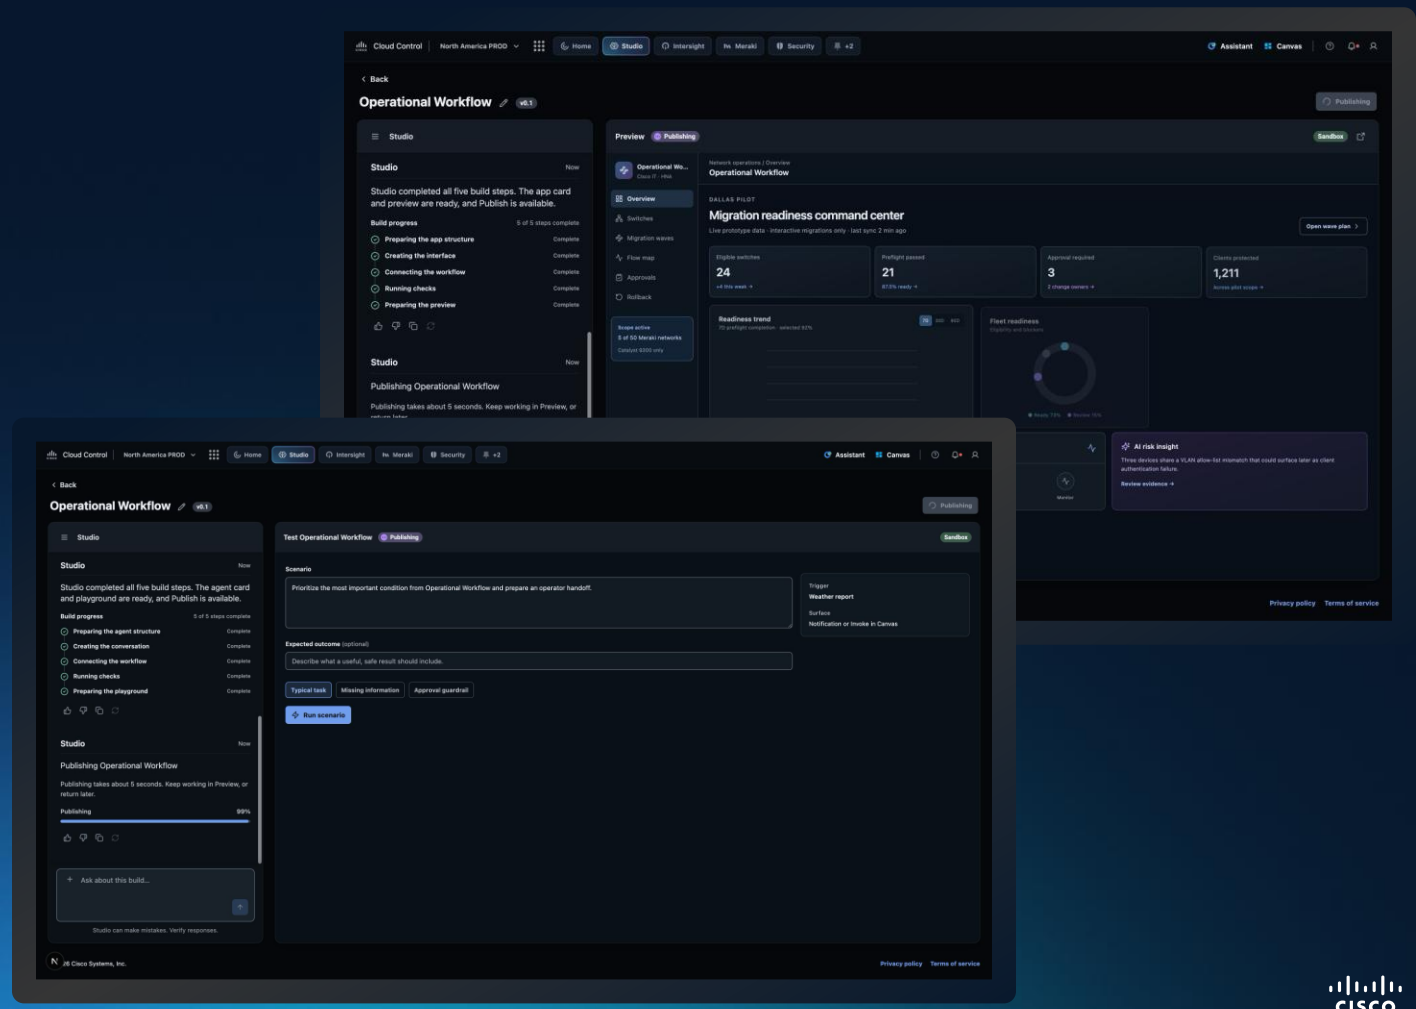

Bring runbooks, procedures, and specialist knowledge into daily operations.

Extend team capacity

Assist operators directly or keep work moving ambiently.

Increase platform value

Use Cloud Control context, integrations, identity, and governance in every application.

Cisco Confidential

One application, multiple capabilities

One Studio application combines capabilities for an operational outcome.

Tailored user interfaces

Custom views unifying context, capabilities, and actions.

Agents

Custom agents for operations, assisting users or working ambiently.

Agent Skills

Runbooks and expertise brought to life through agents.

External Integrations

Non-Cisco context and actions for applications and agents.

Workflows

Deterministic execution of end-to-end IT processes.

Persistent storage

Application context retained across runs.

What changes for your team

Turn operational speed into an advantage

One connected platform unifies visibility, intelligence, and action.

Protect customer confidence

Cross-domain intelligence reveals risks and impact that siloed tools miss.

Increase operational capacity

AI agents use shared context to plan and move work forward, with people in control.

Make investments work harder

An extensible foundation connects existing tools, data, and expertise.

AI Canvas vs AI Assistant

Two surfaces. One intelligence.

Feature	Cisco AI Assistant	Cisco AI Canvas
What's it for	Investigate, ask, and resolve	Investigate, ask, and resolve
How you use it	Conversational chat	Visual interactive workspace
Collaboration	Single player, private	Multiplayer, shareable
Typical session	Seconds to minutes	Minutes to hours
Output	Text answers: summaries, recommendations, answers	Interactive widgets: Visualized data, topologies, timelines, reports
Where it shines	Speed. Move through your day faster.	Context. Explore the "why" behind the data

Cisco Confidential

Cloud Control vs IQ (1/2)

Built for different jobs. Designed to work together

IQ
AI-powered services

- Lifecycle visibility & planning
- Assessments & compliance gaps
- Expert-informed guidance
- Benchmarking & risk prioritization
- Support & Professional Services

Same asset truth across both experience

Cloud Control
AI-powered operations

- Live telemetry across your IT estate
- Cross-domain visibility
- Real-time action & remediation
- AI Canvas collaborative workspace
- Automated resolution workflows

© 2026 Cisco and/or its affiliates. All rights reserved.

Cloud Control vs IQ (2/2)

How they are complementary

Scenario A
Start with insight

1. IQ flags 3 branches out of compliance
2. Step-by-step remediation blueprint generated
3. Move to Cisco Cloud Control → push fix → validate in real-time

Scenario B
Start with incident

1. Cisco Cloud Control telemetry flags a memory leak on 5 firewalls
2. Mitigate immediately via AI Canvas
3. Move to IQ → find every affected device → build upgrade

IQ shows me risks I haven't hit yet. Cisco Cloud Control shows me patterns I wouldn't have found anywhere else. Together, they keep me ahead of the problem.

AI Canvas & Splunk

AI Canvas coordinates; Splunk deepens the analysis.

Function	AI Canvas	Splunk
Primary role	Creates the shared investigation and coordinates the response	Analyzes data across systems and over time
Explaining the issue	Brings findings from Cisco products, tools, agents, and teams into one view	Finds patterns and connections that confirm or challenge the diagnosis
Supporting action	Connects the investigation to Cisco capabilities and keeps teams aligned	Provides deeper findings and can trigger configured automation
Preserving work	Keeps the evidence, decisions, and actions together as one case	Keeps data, searches, detections, and dashboards for future use
Distinct value	Gives teams and agents one place to investigate and respond	Finds issues that individual products or short-term data may miss

AI Canvas turns connected evidence into a coordinated response. Splunk provides the analytical depth to validate the diagnosis, expose wider impact, and confirm recovery.

Cisco Confidential

Cisco Cloud Control & Splunk

Strong independently, more powerful together.

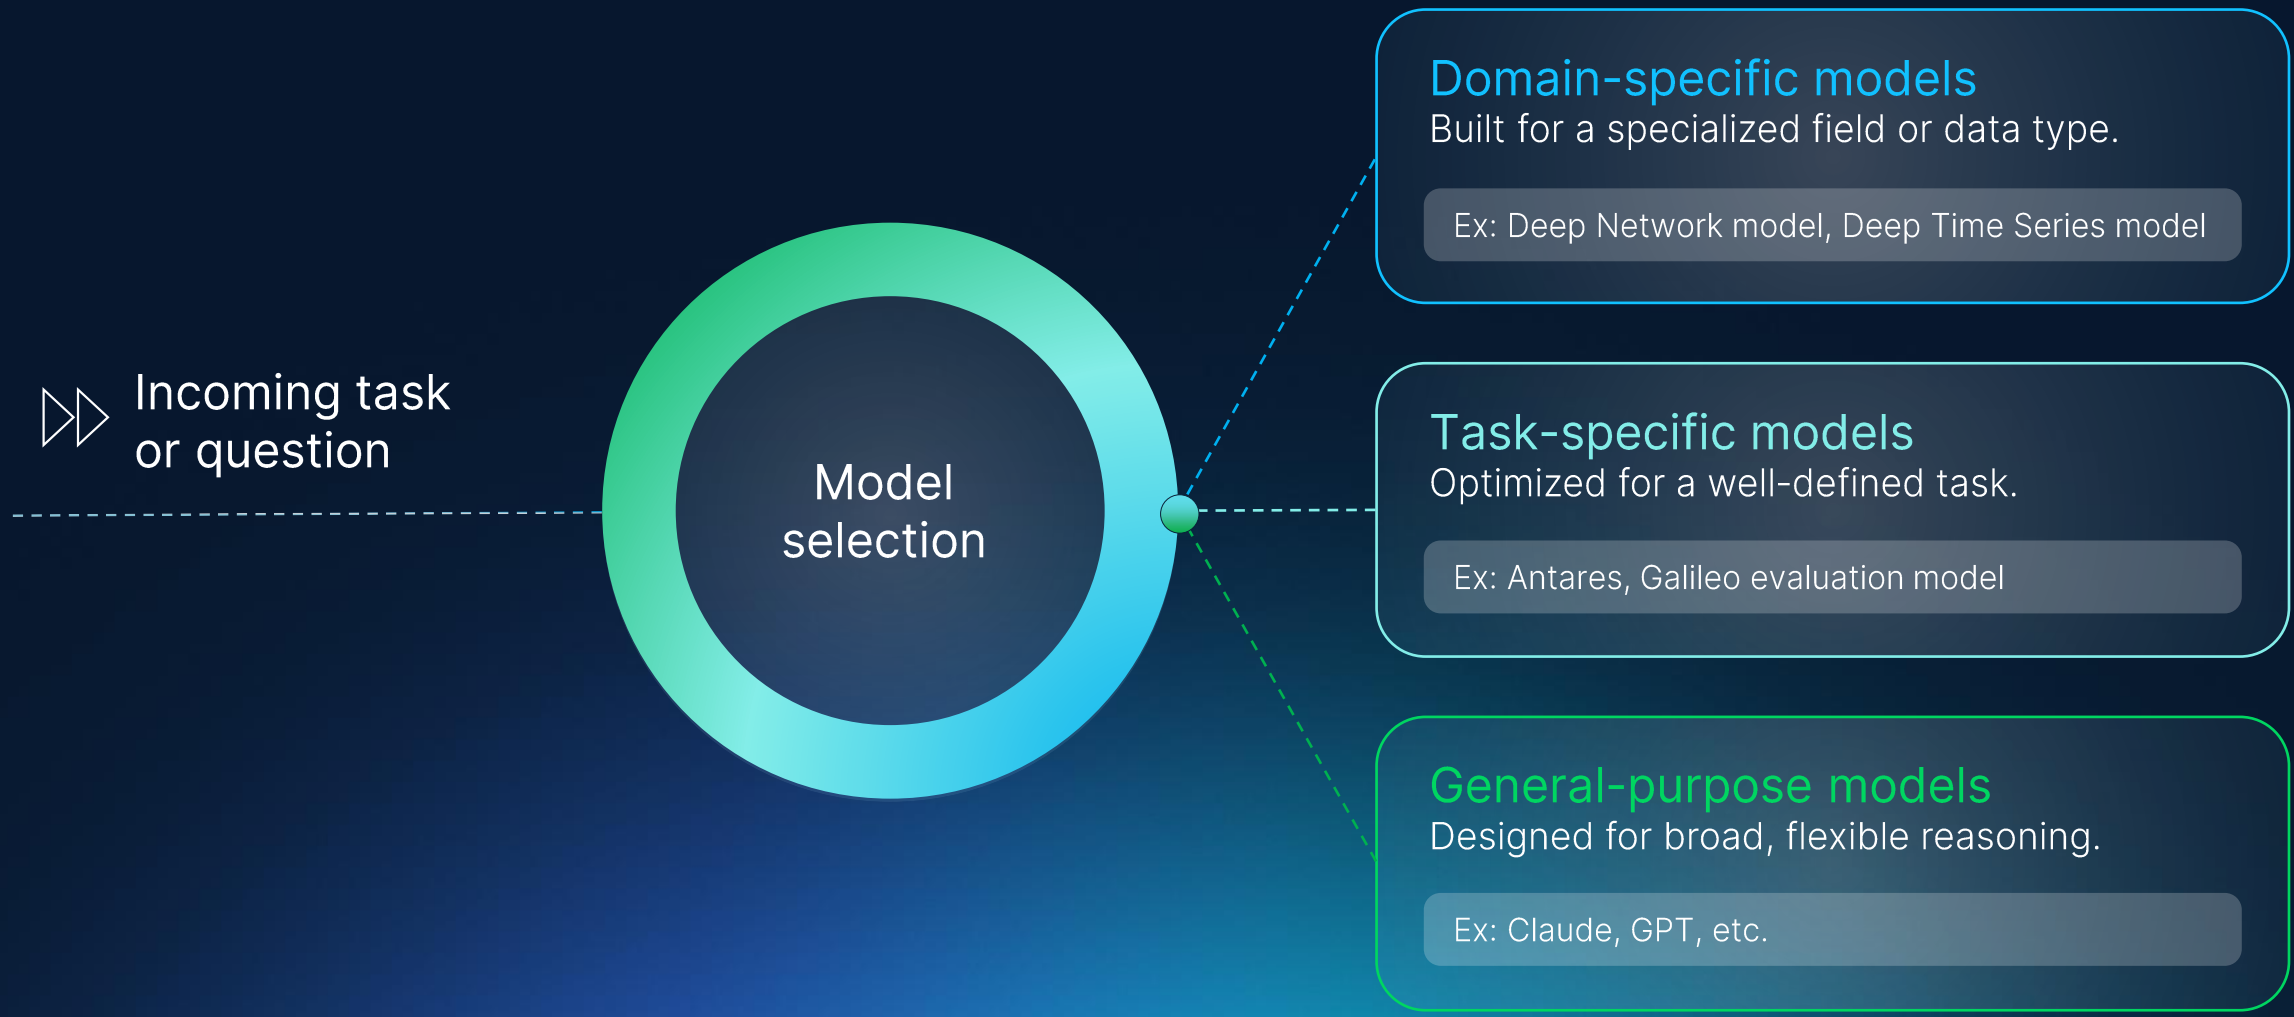

Relationship	Direct claim	Customer impact
Complementary	Cloud Control connects Cisco operations. AI Canvas and Assistant coordinate the investigations. Splunk adds deeper evidence across systems and time.	Customers connect broad analytical insight directly to the affected Cisco environment and the response.
Supplementary	Cloud Control delivers investigation and response value on its own. Splunk expands that value with historical context, cross-system correlation, and reusable analytics.	Customers gain more confidence in the diagnosis, see wider impact, and verify that the response worked.
Redundant	Canvas and Splunk may both query data, explain findings, visualize results, recommend actions, or start workflows. The overlap supports flexibility, but it requires clear ownership.	Customers can work in the experience that best fits the task without creating conflicting answers or duplicate actions.

1:Many product (tenant) linking

Manage many product instances in one place

Bring your full product estate together

Link multiple product instances to one Cloud Control tenant.

Organize around how teams work

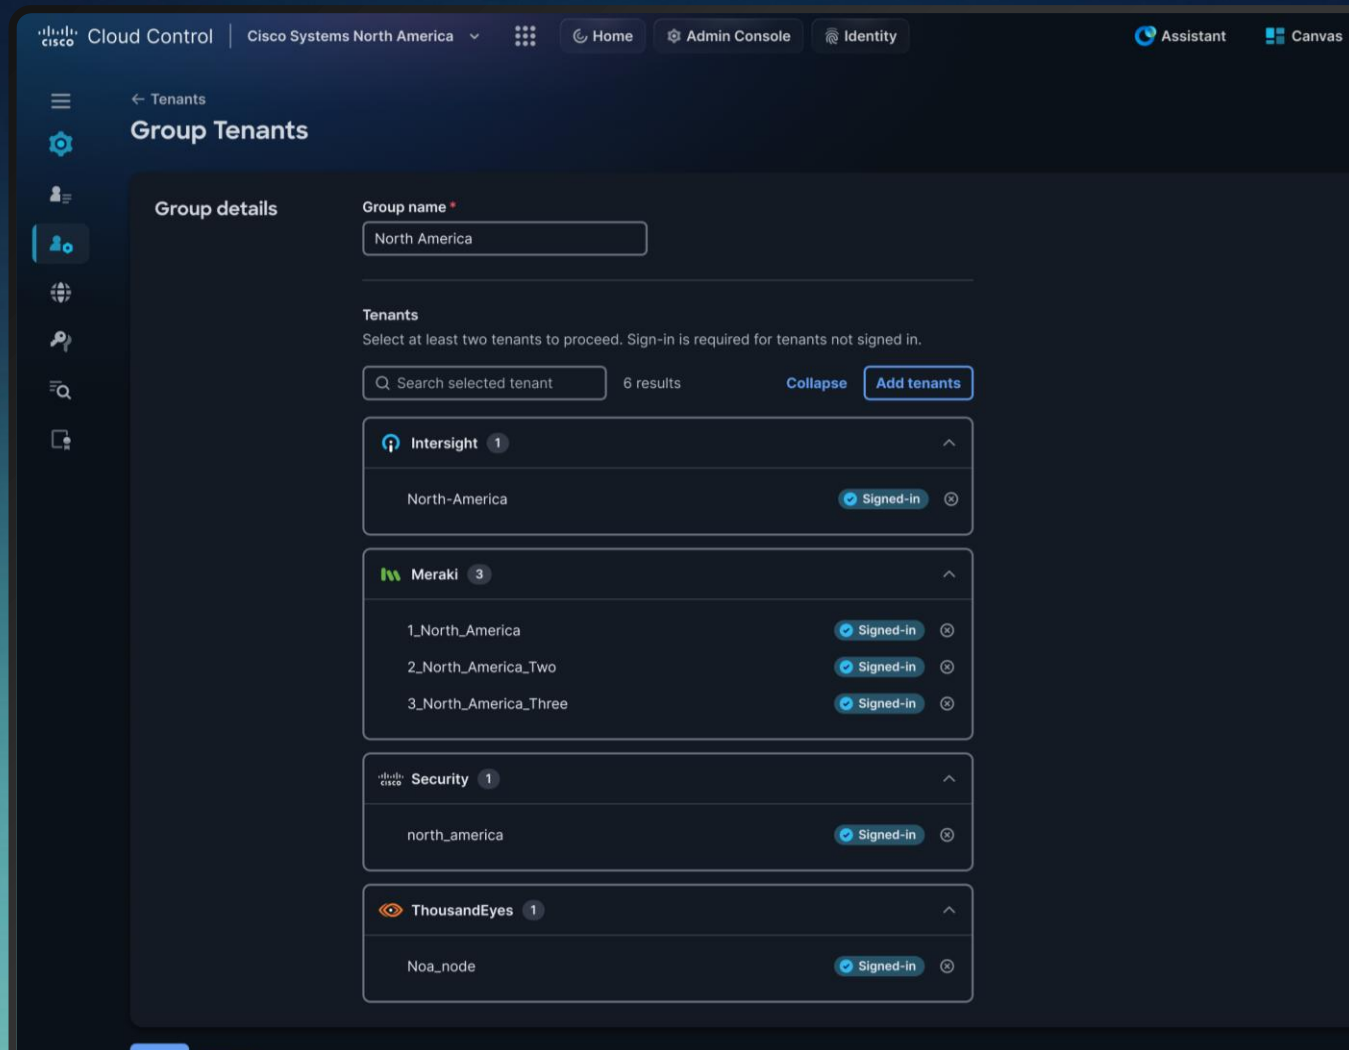

Use Tenant Groups to match regions, teams, or workloads.

See and act across the active scope

Combine data across instances while keeping actions correctly targeted.

Switch scope without losing control

Move between contexts while access and product boundaries stay intact.
