Overview, Prerequisites

Overview

What is 3 Way RMA:

The 3-Way RMA enables Partners to use spare inventory in their depot during RMA replacements. When a device becomes faulty at the customer site, the Partner can replace the faulty device with their spare part, and Cisco will provide a replacement for the failed part, which can then be kept as a spare again.

Benefits of 3 Way RMA sparing process:

- Allows undisrupted service for end customer without any delays with the spare item available in partner depot
- Automated RMA process supporting 3 Way RMA transactions
- Minimize / eliminate partner overhead to monitor and coordinate contract swaps.

Pre-conditions for successful 3 Way / Self-Sparing RMA processing:

- This applies only for partner branded services.
- Partner needs to be registered for 3 Way RMA / Self-Sparing transactions
- Defective SN (Serial Number) matches the Product ID (PID) and is actively covered on a Partner branded service contract.

Prerequisites

How to register?

Partners-

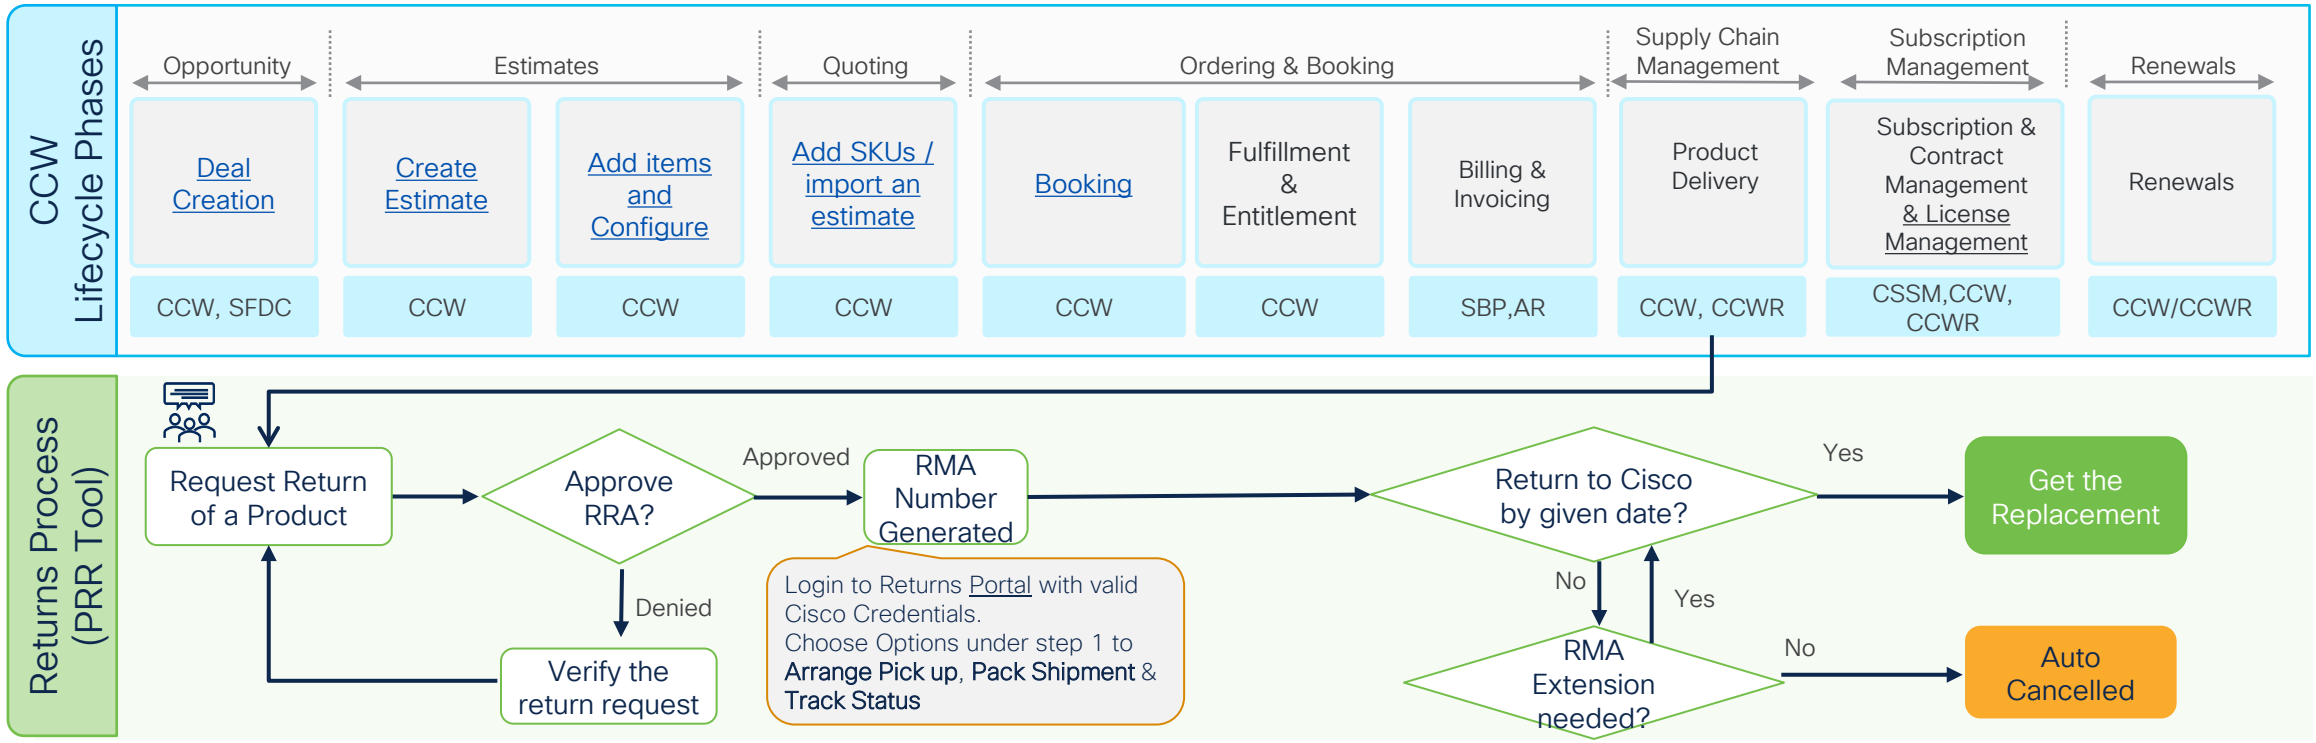

- Partner needs to be registered for 3 Way RMA / Self-Sparing transactions using the link
  - Partner need to work with respective Cisco contacts (POM's, Service entitlement leader, Sales or any of the Cisco contacts) for details on the registration process (Bill to ID, customer name, cco id details, Partner BEGEO ID etc)

Return Material Authorization (RMA) Flow

CCW Order Returns:

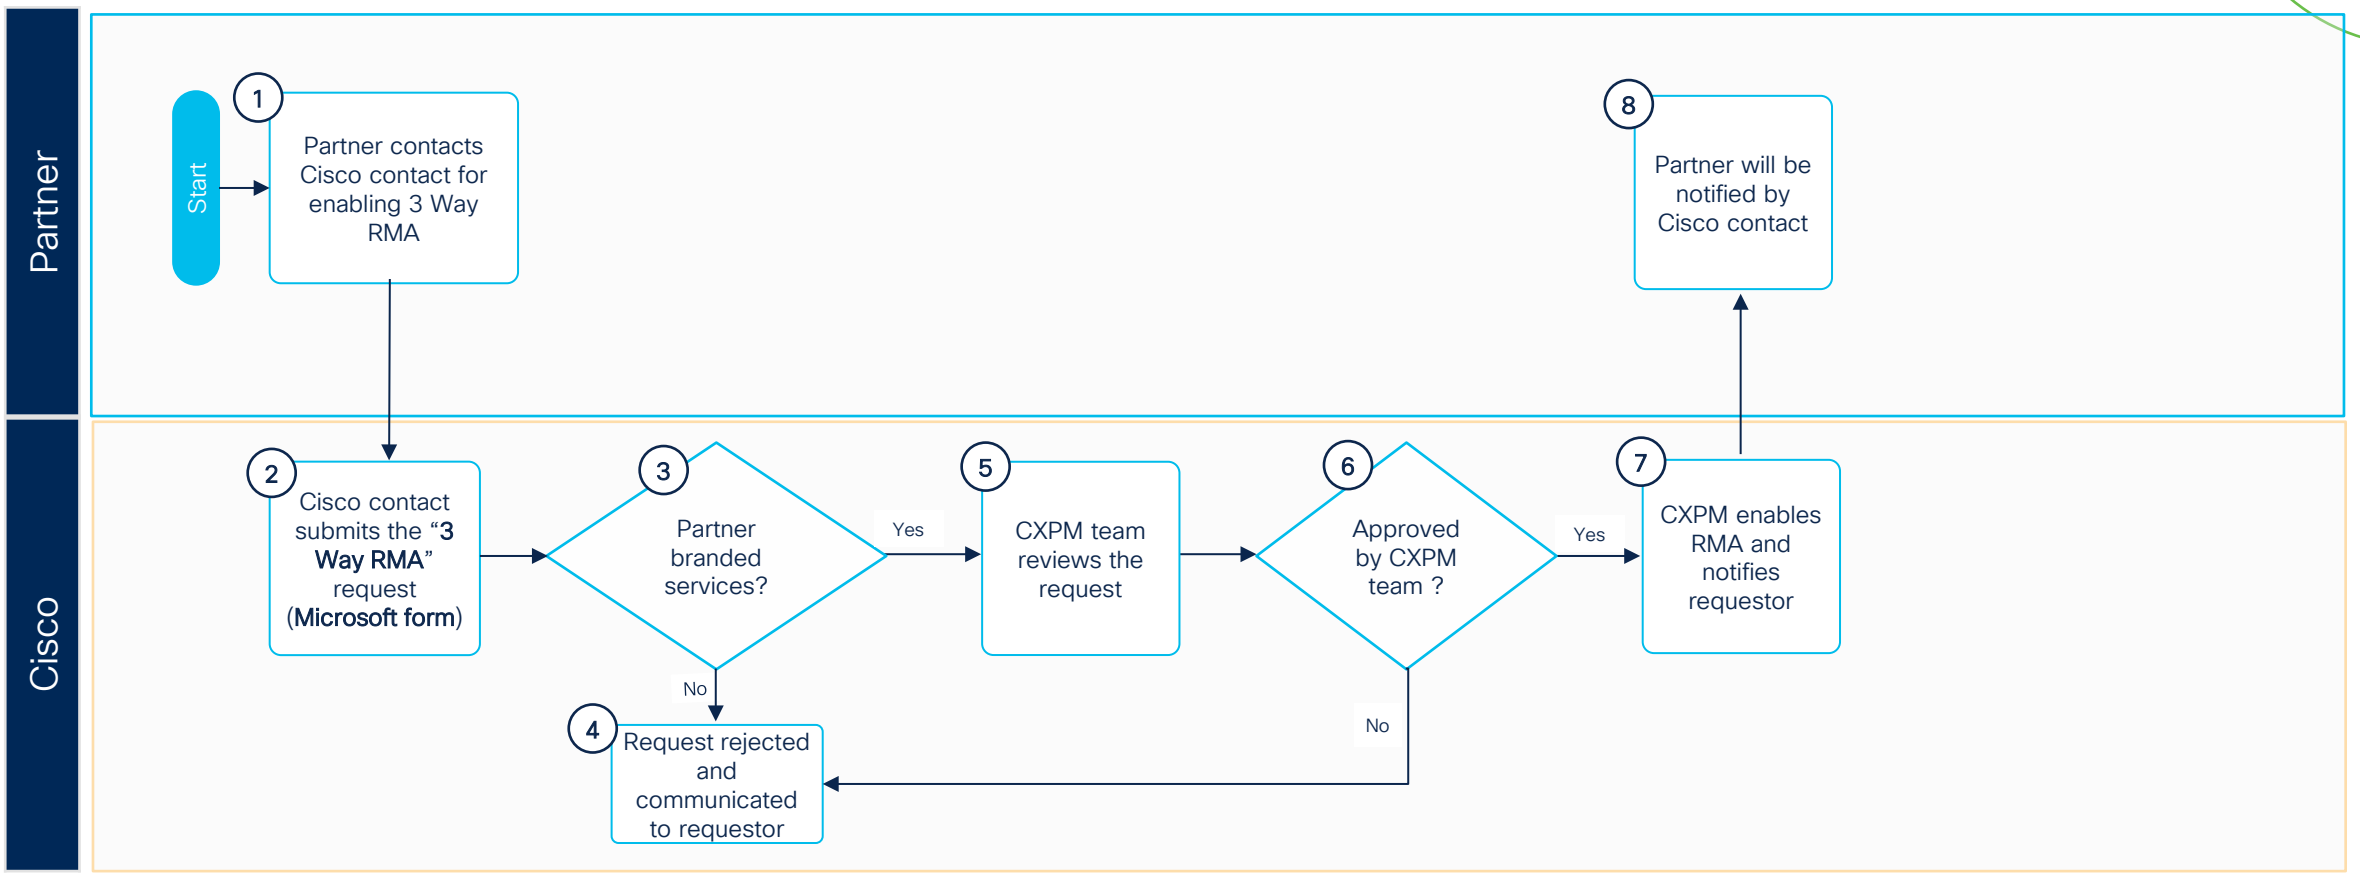

The **Cisco Returns Portal** is designed to facilitate the return of Cisco products. It provides a **streamlined process for obtaining aReturns, arranging pick-up, packing shipments, and tracking the status of returns. This portal is accessible to Cisco customers who need to return products, whether for recycling or due to end-of-use**. Users can raise a Returns request through the Portal.

* If Reopen option is not available, then AAR is not eligible for a re-submission

3-Way RMA – Partner process for swapping Cisco Product - Self Sparing (High level process flow)

© 2026 Cisco and/or its affiliates. All rights reserved.

****Note: Cisco is not aware of the part being swapped until step 6a.

3-Way RMA – Partner process for swapping Cisco Product – Self Sparing (Process Overview – Sample Scenario)

Customer

- Customer Identifies the product as faulty and reports to partner

Partner

- Partner troubleshoot and identifies the product as defective
- Swap the product with the spare item available in the inventory
- Raise an RMA request for replacement of the defective products
- Keeps the replacement spare item in the depot

Cisco

- Process the RMA request
- Ships the replacement product to partner
- Return the defective serial number
- Swap the defective serial number available in contract with the new spare serial number

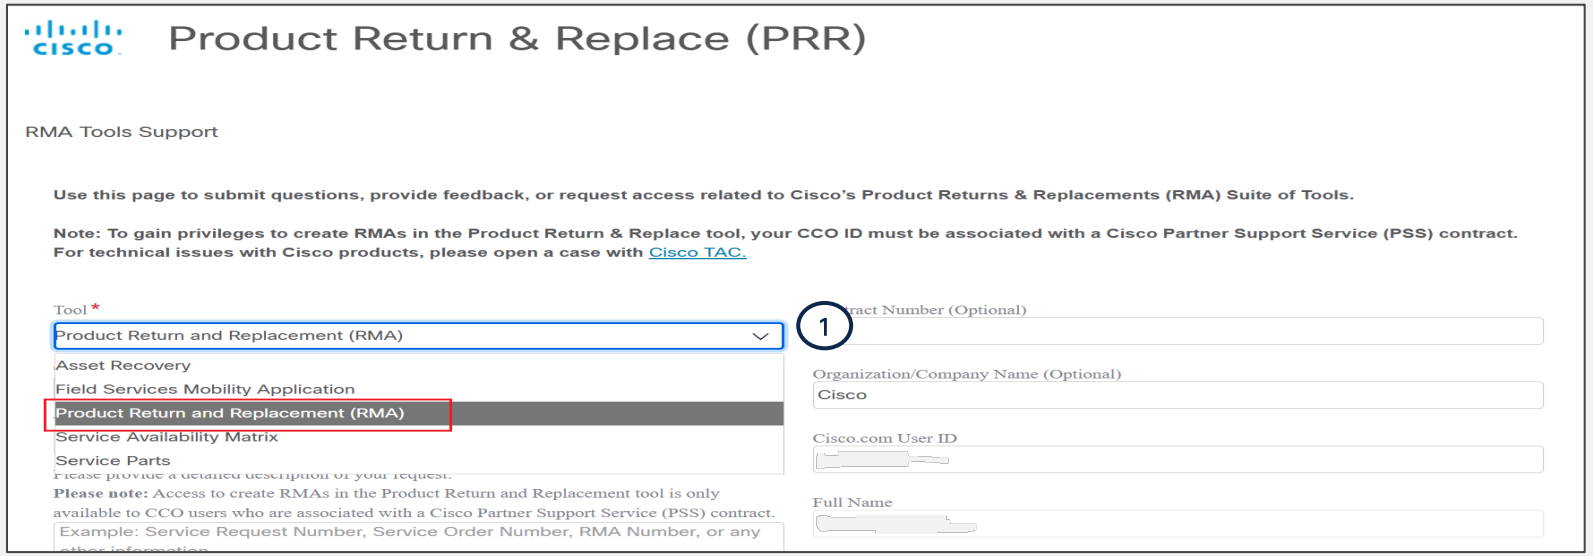

Process steps	Customer	Partner	Cisco
1. Customer identifies the defective item	Defective Serial Number **XYZ23** (Contract)	Spare Serial Number **ABC43**	Replacement Serial Number **MNO54**
2. Partner swaps the spare item.	Spare Serial Number **ABC43**	Defective Serial Number **XYZ23**	Replacement Serial Number **MNO54**
3. Partner raise RMA replacement request with Cisco	Spare Serial Number **ABC43** (Contract)	Replacement Serial Number **MNO54**	Defective Serial Number **XYZ23**
