Any information provided in this document regarding future functionalities is for informational purposes only and is subject to change including ceasing any further development of such functionality.

Many of these future functionalities remain in varying stages of development and will be offered on a when-and-if available basis, and Cisco makes no commitment as to the final delivery of any of such future functionalities.

Cisco will have no liability for Cisco's failure to deliver any or all future functionalities and any such failure would not in any way imply the right to return any previously purchased Cisco products.

This is not a commitment to deliver any material, code or functionality and should not be relied upon in making purchasing decisions.

Cisco Cloud Control with AI Canvas

The unified operations platform for AgenticOps

The screenshot displays the Cisco Cloud Control interface, which is a unified operations platform for AgenticOps. The interface is divided into several sections:

- Header:** Includes the Cisco logo, "Cloud Control", and navigation tabs for Home, Cisco IQ, Identity, Intersight, Meraki, Multicloud Fabric, and Nexus Hyperfabric.
- AI Assistant:** A central chat interface with a greeting "Good morning, Chuck" and a status "Your network is stable." It also mentions "There are 3 new actions that require review." and a "Review actions" button. Below this is a search bar with the prompt "Ask anything, / for prompts, # for knowledge" and a "Default" dropdown.
- Network Health Dashboard:** A collection of widgets providing a comprehensive overview of network status:
 - Recently Connected Clients:** A table listing clients, devices, access points, SSIDs, signals, and statuses.
 - Application Path Health:** A line graph showing packet loss and application availability over time.
 - Application QoS Policy:** A table detailing QoS policies for various applications, including priority, bandwidth, and tunnel settings.
 - Network Topology:** A diagram showing the network architecture, including Internet cloud, security appliances, switches, access points, and clients.
 - Threats Blocked Over Time:** A bar chart showing the number of threats blocked over a 24-hour period.
 - Top Data Center Anomalies:** A table listing anomalies, their severity, categories, affected nodes, and recommended actions.
- Footer:** A disclaimer stating "Assistant can make mistakes. Verify responses. Learn how the AI Assistant handles data at AI Assistant disclosures."

Best in class.
Four decades running.

Cisco Cloud Control

One platform. Every domain. The foundation IT runs on.

Meraki ▪ Catalyst Center ▪ SD-WAN ▪ Nexus Dashboard ▪ Nexus Hyperfabric ▪ Intersight ▪ Security ▪ Identity ▪ Collaboration Control Hub ▪ Splunk ▪ IQ ▪ ThousandEyes

Cisco Cloud Control

The power of one

One login

Sign in once. See everything.

One inventory and topology

Every asset. See how it all connects, in real time.

One view for alerts

Actions correlates alerts across every product.

One assistant

Quick answers and action with AI Assistant.

One agentic workspace

Investigate and resolve together with AI Canvas.

Unified inventory

Log-in once, **access your Cisco products**

 Cloud Control

Continue

Cisco Cloud Control is in General Availability in the U.S. [Learn more](#)

Unified inventory

See every Cisco asset in one place

Know what is connected

See assets from connected products in one inventory.

Find the right asset quickly

Use AI-powered search and filter without opening each product.

Give teams a consistent view

Work from the same asset information across operations.

Continue in the right product

Open the source product when deeper management is needed.

Connected topology

See every site, branch and device in one view

Bring connections into one view

Map relationships across connected products and domains.

Understand dependencies

Trace how devices, sites, and services connect.

See what an issue could affect

Follow relationships before deciding what to do next.

Move directly to asset details

Open the related asset or product without searching again.

Actions

Turn alerts into faster resolution

Cut through alert noise

Related alerts from connected products become one clear issue.

Focus teams on what matters

Priority and impact show where to start.

Start troubleshooting immediately

Opening an issue brings in the Assistant and relevant AI agents.

Move work toward resolution

Assign, track, and resolve each issue from one place.

The screenshot displays the Cisco Cloud Control interface. The top navigation bar includes links to Home, Cisco IQ, Identity, Intersight, Meraki, Multicloud Fabric, Nexus Hyperfabric, Security, and Assistant. The left sidebar shows tabs for Assistant, Canvas, and Actions. The main content area is titled 'Checkout outage from disk failure' and shows a critical alert from today at 9:41 AM. The alert details state: 'A physical disk failure on UCS-DC1-PROD-04 made the host unresponsive, causing an outage for Global-Retail-Checkout. Correlated alerts show application, network, and connectivity failures.' Below this, a 'Related alerts' section lists four related issues: Intersight (Hardware Fault), Nexus Dashboard (Fabric Path Anomaly), ThousandEyes (Synthetic Test Failure), and Splunk Dashboard (Log-Based Alert). The 'Recommended Actions' section includes 'Restore Service' (initiate an automated workload failover) and 'Hardware Remediation' (replace the faulty disk). At the bottom, there is a chat input field for the AI Assistant with a 'Default' dropdown and a 'Send' button.

Assistant

One assistant across your work

Get answers without switching tools
Ask from anywhere in Cloud Control
using the context already in view.

See more of the issue
Use data from connected products to
understand what is happening.

Move from answer to action
Follow recommended next steps or
start a Workflow.

Bring in others without starting over
Move into AI Canvas with the issue
and context intact.

Assistant can make mistakes. Verify responses. Learn how the AI Assistant handles your data at AI Assistant disclosures.

Workflows

Automate change across products

Reduce repetitive work

Connect product actions into one reusable, no-code workflow.

Get predictable execution

The same inputs follow the same defined steps every time.

Respond faster without handoffs

Start work from an alert, schedule, or request.

Scale automation with control

Reuse approved workflows and record what ran and changed.

Cisco AI Canvas

The industry's first multiplayer workspace for cross-domain agentic operations

IT operations today

You see the symptom. The cause could be anywhere.

Networking

Security

Compute

Observability

Collaboration

Third-party
Ecosystem

“Why is my application so slow?”

Every domain. One agentic workspace.

Describe the problem. AI Canvas reasons across your entire environment to deliver the answer.

Cisco AI Canvas

Where work gets done

See the whole issue

Across your entire Cisco portfolio and beyond.

Put AI agents to work

Agents gather data, reason across domains, and recommend next steps.

Work together in real time

Teams collaborate on one Canvas with the same live context.

Carry context through resolution

Handoffs, shift changes, and escalations keep the work intact.

The screenshot displays the Cisco AI Canvas interface, which is a collaborative workspace for managing network issues. The interface is divided into several sections:

- Investigation Limitations:** A list of limitations on the investigation, including Secure Access, Webex Control Hub, Meraki client count, and Intersight firmware compliance.
- Alert summary:** A summary of alerts from various sources, including 5 Nexus fabrics at critical anomaly level, SD-WAN: 368 active alarms (138 critical), Meraki Buenos Aires — VPN score 33, and Intersight: 1 account-level critical alarm.
- Network health:** A section showing the health of various network components, including Meraki networks, Buenos Aires VPN score, Mexico City network score, and Meraki alerts (24hr).
- Data table:** A table showing the status of various domains, including Meraki Network, Meraki Mexico City, Meraki Buenos Aires, ThousandEyes Alerts, ThousandEyes Tests, ThousandEyes Outages, Intersight Compute, Intersight Firmware, Webex Control Hub, and Secure Access.

The interface also includes a search bar, a navigation menu, and a footer with the text "© 2026 Cisco and/or its affiliates. All rights reserved."

Purpose-built for the operator

Inside AI Canvas

Conversational interface

- Ask questions in natural language
- Watch agents reason live

Agentic Modes

- Default for fast answers
- Reasoning for deep investigations

Multiplayer

- Share the board via link
- Everyone sees the same view

Board Organization

- Widgets color coded by category
- Mini-map for ease of navigation

Widgets

- Visualize topologies, charts, summaries, reports
- Drill into supported widgets to investigate further
- Export widgets as PDF

How it works

Canvas surfaces cross-domain telemetry for agentic action

Bring complete context in Canvas

Leverage your **entire** environment

Meraki Catalyst Center SD-WAN Duo
Splunk Cisco Identity Intelligence IQ
Security Cloud Control ThousandEyes ISE
Nexus Dashboard Collaboration Control Hub
AI Defense Nexus Hyperfabric Intersight

& many more

Cisco first-party products*

Airtable Microsoft PagerDuty
servicenow WIZ tenable DATADOG
aws PingIdentity workato okta
BLUECAT Microsoft ATlassian

& many more

Third-party ecosystem via Marketplace*

Note: Not all Cisco products will be available from Day 1; availability will be phased. Not all third-party integrations referenced are committed integrations.

Operations outgrow standard tools

Operations span disconnected systems

Every environment works differently

Teams maintain the missing pieces

What works can be hard to scale

Cloud Control Studio Beta

Build what **your** operations need

Fit your specific operations

Create apps & agents around your teams, workflows, and priorities.

Connect your full environment

Bring Cisco, third-party, and homegrown context into one.

Move from need to working app

Describe, preview, and refine before publishing.

Scale solutions with control

Share approved apps across teams while keeping governance intact.

Build an app

Build an agent

Cloud Control Marketplace

Extend Cloud Control beyond

Fast time to value

Pre-built, ready-to-deploy solutions.
Go live in minutes, not months.

Work with your existing tools

ServiceNow, Azure, Slack, Webex, and many more.

Meet more operational needs

Solutions tailored for Network Admins, IT Ops, MSPs, and System Integrators

Expand access with control

Make approved capabilities available to the right teams.

Cloud Control Marketplace

Leverage an open ecosystem

Note: Not all Cisco products will be available from Day 1; availability will be phased. Every logo does not represent committed integrations.

No new license.

- 1 Included with your subscription license for eligible Cisco products.
- 2 Included in all license tiers.
- 3 Base usage and base rate limits included.

Cisco reserves the right to adjust monetization, pricing and packaging in the future. Usage and rate limits may apply.

What changes for **your** team

Turn operational speed into an advantage

One connected platform unifies visibility, intelligence, and action.

Protect customer confidence

Cross-domain intelligence reveals risks and impact that siloed tools miss.

Increase operational capacity

AI agents use shared context to plan and move work forward, with people in control.

Make investments work harder

An extensible foundation connects existing tools, data, and expertise.

 Cloud Control

Additional slides

AI Canvas vs AI Assistant

Two surfaces. One intelligence.

Feature	Cisco AI Assistant	Cisco AI Canvas
What's it for	Investigate, ask, and resolve	Investigate, ask, and resolve
How you use it	Conversational chat	Visual interactive workspace
Collaboration	Single player, private	Multiplayer, shareable
Typical session	Seconds to minutes	Minutes to hours
Output	Text answers: summaries, recommendations, answers	Interactive widgets: Visualized data, topologies, timelines, reports
Where it shines	Speed. Move through your day faster.	Context. Explore the “why” behind the data

Built for different jobs. Designed to work together

IQ

AI-powered services

- Lifecycle visibility & planning
- Assessments & compliance gaps
- Expert-informed guidance
- Benchmarking & risk prioritization
- Support & Professional Services

Same asset truth
across both
experience

Cloud Control

AI-powered operations

- Live telemetry across your IT estate
- Cross-domain visibility
- Real-time action & remediation
- AI Canvas collaborative workspace
- Automated resolution workflows

How they are complementary

Scenario A Start with insight

1. IQ flags 3 branches out of compliance
2. Step-by-step remediation blueprint generated
3. Move to Cisco Cloud Control → push fix → validate in real-time

Scenario B Start with incident

1. Cisco Cloud Control telemetry flags a memory leak on 5 firewalls
2. Mitigate immediately via AI Canvas
3. Move to IQ → find every affected device → build upgrade

IQ shows me risks I haven't hit yet. Cisco Cloud Control shows me patterns I wouldn't have found anywhere else. Together, they keep me ahead of the problem.

AI Canvas & Splunk

AI Canvas coordinates; Splunk deepens the analysis.

Function	AI Canvas	Splunk
Primary role	Creates the shared investigation and coordinates the response	Analyzes data across systems and over time
Explaining the issue	Brings findings from Cisco products, tools, agents, and teams into one view	Finds patterns and connections that confirm or challenge the diagnosis
Supporting action	Connects the investigation to Cisco capabilities and keeps teams aligned	Provides deeper findings and can trigger configured automation
Preserving work	Keeps the evidence, decisions, and actions together as one case	Keeps data, searches, detections, and dashboards for future use
Distinct value	Gives teams and agents one place to investigate and respond	Finds issues that individual products or short-term data may miss

AI Canvas turns connected evidence into a coordinated response. Splunk provides the analytical depth to validate the diagnosis, expose wider impact, and confirm recovery.

Cisco Cloud Control & Splunk

Strong independently, more powerful together.

Relationship	Direct claim	Customer impact
Complementary	Cloud Control connects Cisco operations. AI Canvas and Assistant coordinate the investigations. Splunk adds deeper evidence across systems and time.	Customers connect broad analytical insight directly to the affected Cisco environment and the response.
Supplementary	Cloud Control delivers investigation and response value on its own. Splunk expands that value with historical context, cross-system correlation, and reusable analytics.	Customers gain more confidence in the diagnosis, see wider impact, and verify that the response worked.
Redundant	Canvas and Splunk may both query data, explain findings, visualize results, recommend actions, or start workflows. The overlap supports flexibility, but it requires clear ownership.	Customers can work in the experience that best fits the task without creating conflicting answers or duplicate actions.

Purpose-built models

Matching the right intelligence to the right problem

1:Many product (tenant) linking

Manage many product instances in one place

Bring your full product estate together

Link multiple product instances to one Cloud Control tenant.

Organize around how teams work

Use Tenant Groups to match regions, teams, or workloads.

See and act across the active scope

Combine data across instances while keeping actions correctly targeted.

Switch scope without losing control

Move between contexts while access and product boundaries stay intact.

The platform

The foundation everything is built on.
