Inventory

Last updated 5 minutes ago

300 assets, 150 switches, 50 routers, 50 access points, 50 WAN appliances

Insights

Operations & Health

7 critical PSIRT vulnerabilities detected on 6 devices in Tokyo Campus

2 Critical health | 7 Critical PSIRTs | 6 Stale (> 60m) | 6 LDOS ≤ 90d

[View devices](#) > [Ask AI assistant](#)

Inventory & Administration

4 devices are experiencing packet loss and latency, impacting 85 users in Tokyo

2 Critical health | 7 Critical PSIRTs | 6 Stale (> 60m) | 6 LDOS ≤ 90d

[View devices](#) > [Ask AI assistant](#)

Security & Compliance

19 devices have license compliance issues, including 22 expired and 7 expiring

2 Critical health | 7 Critical PSIRTs | 6 Stale (> 60m) | 6 LDOS ≤ 90d

Purpose-Built Models

Matching the right intelligence to the right problem

Trusted Agents

Working with live telemetry and model intelligence

Smarter

Agents reason against live telemetry and select the right model for each task.

Everywhere

Agents run where the work happens – on Cisco hardware, software, and throughout the cloud.

Secure

Security telemetry and policy so every agent action is inspected, authorized, and auditable by default.

Devices Reported Offline By Their Management Source

Critical

71 assets reported offline or unreachable by their management source (29 Meraki_Dashboard, 23 Hyperfabric, 19 Security_Cloud_Control). Check each source console for connectivity issues.

29 Meraki_Dashboard 23 Hyperfabric 19 Security_Cloud_Control

Devices At Or Past Last Day Of Support

Critical

24 assets at hardware end-of-life (LDOS): 21 past last-day-of-support, 3 with LDOS within the next 6 months. Plan replacements.

24 Meraki_Dashboard

AI Recommendations

Monitor Meraki MX and Hyperfabric Switches with Unreachable + Version Missing + Non-Compliant or Anomaly Signals

95%

Explanation

Show me devices that are unreachable, missing software versions, and either non-compliant or have major anomalies, focusing on Meraki MX and Hyperfabric Switches

Detect Meraki IoT Cameras and Cellular Gateways with Dormant + LDOS Expired + Unreachable + Version Missing

94%

Explanation

Find Meraki IoT Cameras and Cellular Gateways that are dormant, have expired licenses, are unreachable, and missing software versions

AI Assistant

You

What does the access control policy default action do?

AI Assistant 8:35 PM

The **access control policy default action** determines how traffic is handled when it does not match any explicit access control rule (other than Monitor rules) in the policy. This action is applied after traffic has passed through prefilter policies, Security Intelligence block lists, and decryption policies, and only if it does not match any other rule in the access control policy [1] [2] [3] [4] [5].

Safe and Secure Operation

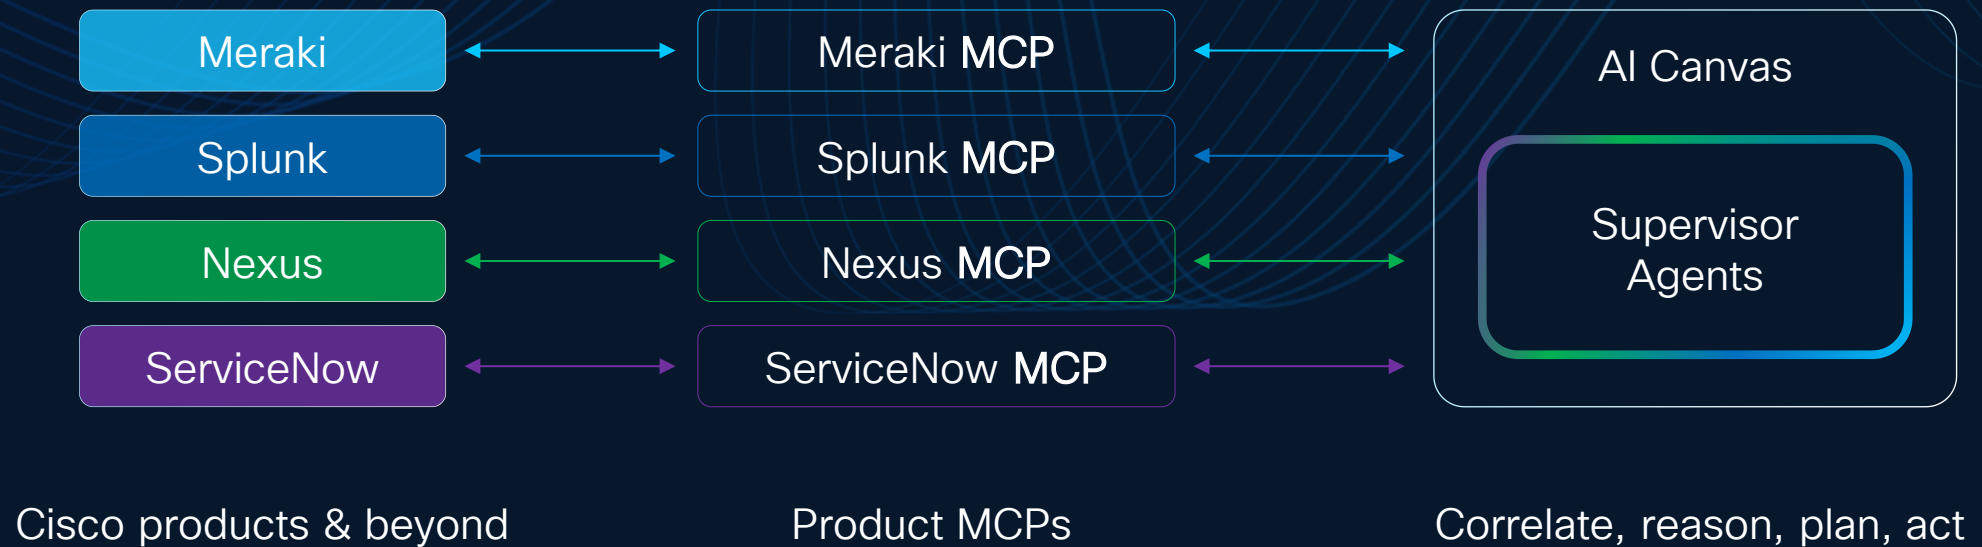

The screenshot displays the AI Canvas Security interface with a dark theme. The top navigation bar includes 'Cloud Control', 'AI Canvas Security', and 'Security'. The main content area is divided into several sections:

- Attack Graph:** A diagram showing a sequence of events: User (jane@mpu.com) -> Process (PowerShell.exe) -> Device (Jane-Laptop-001) -> IP (45.204.19.184, China).
- Compromised Endpoint:** A summary card for 'jane-laptop-001.mpu.com' showing status as 'Compromised', operating system as 'Windows 10 Pro (64-bit)', and last active time as 'Dec 1, 2025 @3:17 PM PST'.
- 24-hr Risk Threshold exceeded for Jane:** A table listing security rules and their actions.

#	Rule name	Action	Source	Destination	Protocol	Application
1	UEBA_LOLBin_NonStandardPath	High	Splunk ES UEBA	JANE-LAPTOP-001 (LOLBin execution anomaly)	Endpoint + Net	treasury-app
2	XDR_LOTL_C2_Beacon	High	Cisco XDR	JANE-LAPTOP-001 -> 60.23.238.174	Endpoint + Net	treasury-app
3	CII_MFA_Fail_Success_NewGeo...	High	CII	jane@mpu.com -> VPN/ZTNA (new IP / high-risk geo)	Endpoint + Net	treasury-app
- Known Threat IP:** A card for 'Jane-Laptop-001' showing it is 'COMPROMISED' with IP 10.10.5.142 and process powershell.exe.
- Direct C2 Traffic:** A diagram showing traffic between 'Jane-Laptop-001' and 'C2 Server' (IP: 45.204.19.184).
- Incident Analysis (AI Canvas):** A detailed summary of a security incident involving suspicious activities and data loss on Jane-Laptop-001.mpu.com. It lists three key findings: a high-severity incident, communication with a known Volt Typhoon C2 server, and multiple threat indicators including DNS abuse and unusual payload execution.

On the right side, there is a sidebar with 'Invite collaborators' and a 'Copy invite link' button.

AI Canvas surfaces cross-domain telemetry for agentic action

Generative UI

A custom dashboard for every question

AI Canvas builds the exact view you need, on the fly, based on your context

Widgets you can act on

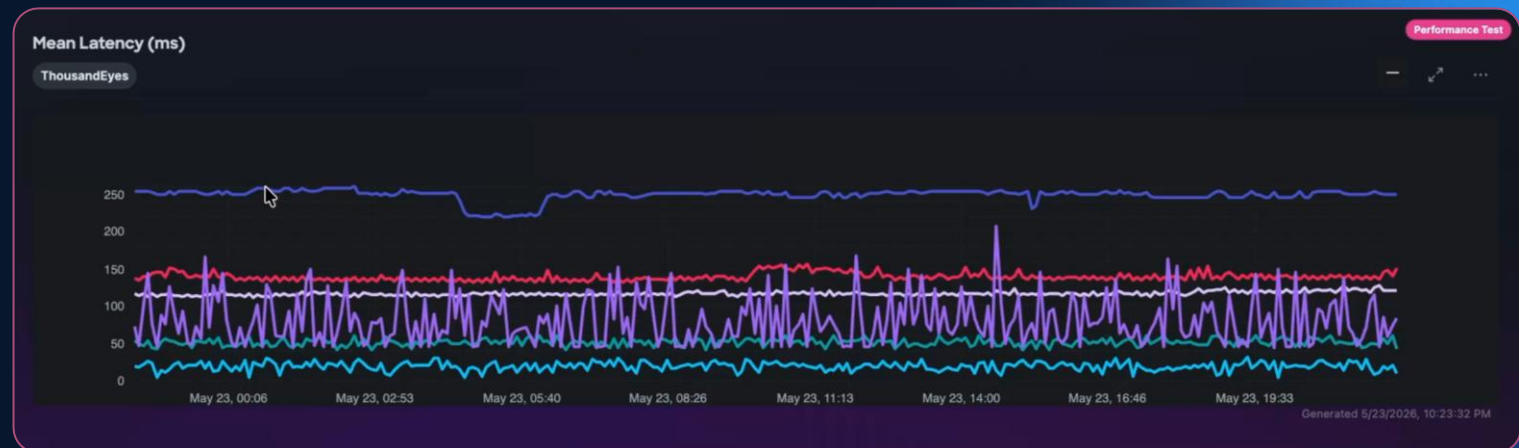

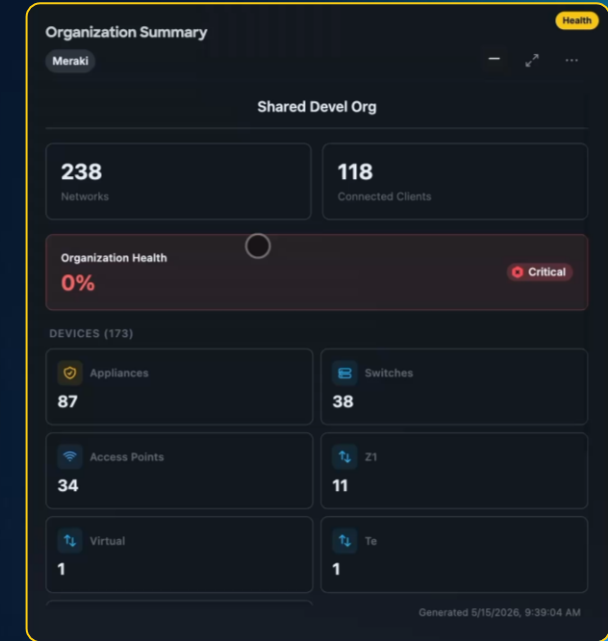

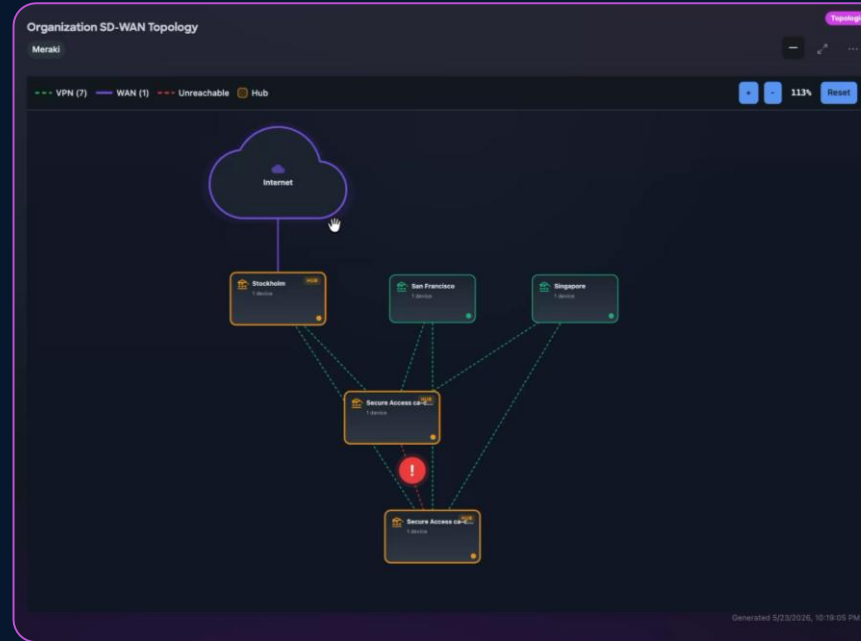

Widgets are interactive: hover for context, click in, and drill down to investigate

Live from your environment

Widgets pull real-time data from your systems

Turn off the noise

Focus on the information you need to resolve incidents faster

Enterprise networks are complex and multi-vendor

"I can't make
agents do what I
actually need."

"My AI doesn't
know my
network."

"I have vendors
other than
Cisco."

Cloud Control Studio

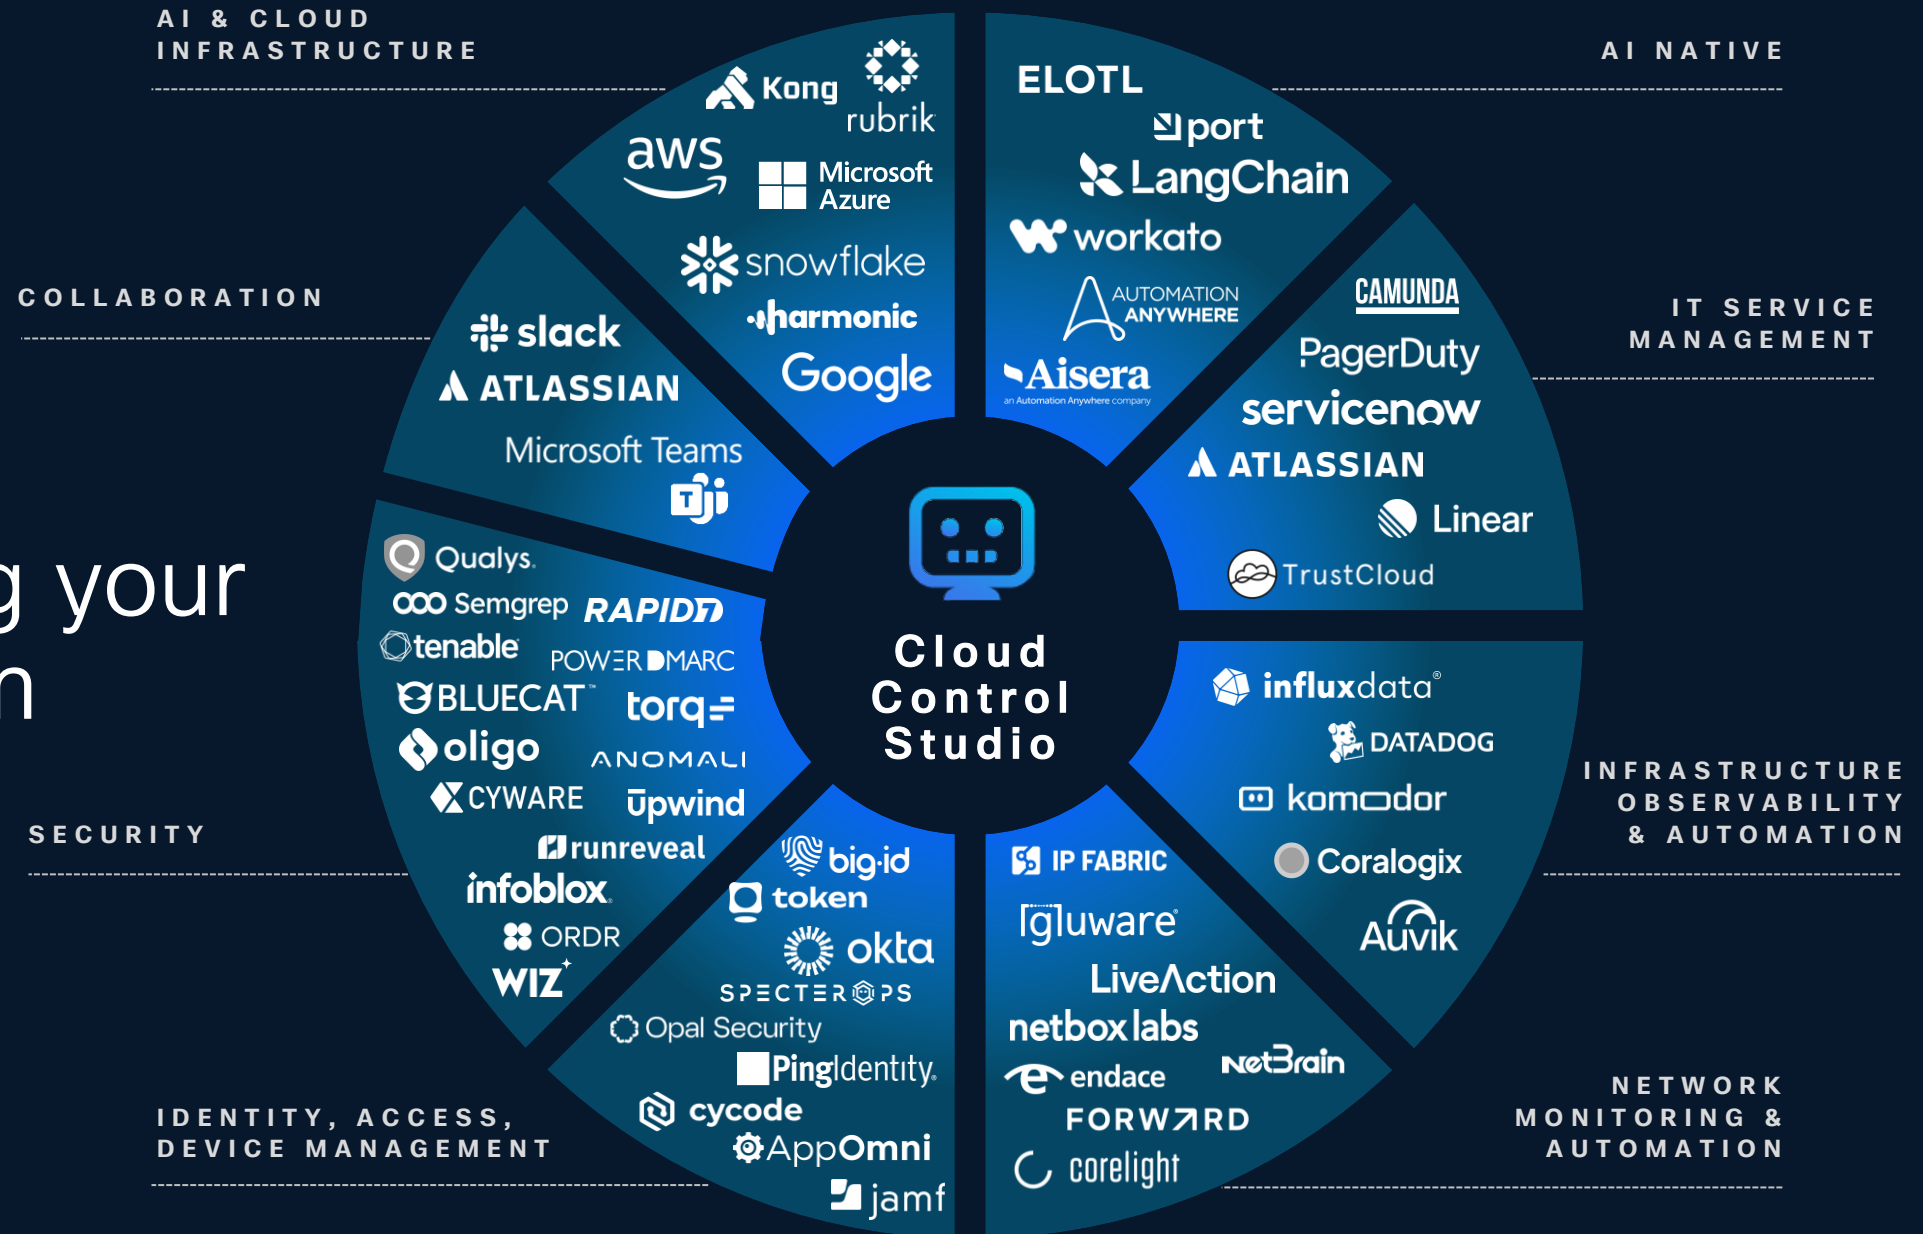

Connect your own agents

Build your own agents

Browse the marketplace

The screenshot displays the Cisco Cloud Control Studio interface. The top navigation bar includes the Cisco logo, 'Cloud Control', 'agentic-c3', and tabs for 'Agent Studio', 'Home', and 'Security'. The right side of the top bar shows 'AI Canvas', a search icon, and a user profile icon. A left sidebar contains a menu with 'Agent Studio', 'Home' (selected), 'Marketplace', 'My Agents', 'Connections', 'Skills', 'Oversight', and 'Security'. The main content area features the heading 'Your Organization. Your AI.' with the subtext 'Connect your tools and knowledge so your agents understand your environment.' Below this is a search bar with the placeholder text 'Ask me anything that you want to build, explore or add'. Three primary action cards are visible: 'Browse Marketplace' (Explore pre-built agents from Cisco and partners), 'Build an Agent' (Create a custom agent with natural language), and 'Add Your Knowledge' (Upload documents and create skills). A 'Popular Agents' section follows, displaying three agent cards: 'Network Outage Agent' (Cisco, 94% success rate, 3.4k runs), 'Daily Network Health' (Cisco, 87% success rate, 2.8k runs), and 'SCADA Connectivity Monitor' (Cisco, 99% success rate, 890 runs). Each card includes a description and an 'Install' button. A vertical 'Give feedback' button is located on the far right edge of the interface.

Integrating your ecosystem

Note: Third-party logos shown here represent integrations that are in progress as of the publication of this content.

No new license. No new cost.

Included with subscription licenses for eligible Cisco products.

Included in both Essential and Advantage tiers.

Base usage and base rate limits are included.

Applies to Controlled Availability period starting June 2, 2026. Cisco reserves the right to adjust monetization, pricing, and packaging in the future. Usage and rate limits may apply.

What's in it for you & your customers?

A unified, governed path to agentic IT.

One platform for management, visibility, and governance — with an easy on-ramp to AI-driven operations

Boost operational KPIs.

Improve MTTD, MTTR, and Service Availability with agent-assisted, collaborative cross-domain troubleshooting

Grow & accelerate multi-domain deals.

Unified, cross-domain agentic ops adds differentiated value to your offers

Shift from selling to co-creating.

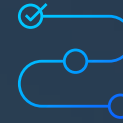

Build custom agents — your unique IP — to bring your vendor ecosystem together and help your customers adopt agentic ops across their entire estate
